Heggenhougen, Stella R. Quah, 2011-01-10 This volume presents the highlights of current global thinking about sexual and reproductive health Major changes have taken place in the last 15 years in the way decision makers think about the subject and the manner in which programmes deliver comprehensive sexual and reproductive health services The turning point was the International Conference on Population and Development ICPD held in Cairo Egypt in 1994 ICPD was a watershed for several reasons First more than in any of the preceding United Nations population conferences the issue of population was clearly placed as being central to sustainable development Second the narrow focus on population growth the population bomb which had been a neo Malthusian concern and preoccupation ever since the Club of Rome published its 1972 report Limits to Growth was replaced by the comprehensive concept of sexual and reproductive health Third and linked to the definition and introduction of the reproductive health concept was the strong call for a paradigm shift away from a policy environment driven by demographic considerations sometimes to the point of using coercion in family planning services in order to reach demographic targets to an environment that recognized the right of individuals to make their own choices And last but not least ICPD as well as the Fourth World Conference on Women FWCW held the following year in Beijing People's Republic of China strongly emphasized that the rights of women and men to good sexual and reproductive health are firmly grounded in universal human rights Provided by publisher

Educational Technologies in Medical and Health Sciences Education Susan Bridges, Lap Ki Chan, Cindy E. Hmelo-Silver, 2015-10-20 This evidence packed guide explores the growing importance of new technologies and situated learning in the vanguard of medical and health sciences education backed by real world clinical applications Its dual emphasis on problem based learning PBL and applied learning is reflected in the range of author perspectives from understanding how technologies engage learners to implications for program design Innovations covered range from wider and more targeted use of mobile devices and electronic medical records to video cases and virtual patients in clinical contexts from family practice to specialized surgery At the same time chapters detail both the necessary hardware for putting these systems into place and the software needed to make them accessible to learners Among the featured topics Technology and group processes in PBL An ethnographic study What is real Using problem based learning in virtual worlds Are Wikipedia articles reliable learning resources in PBL curricula Utilizing mobile electronic health records in clinical education Measuring emotions in medicine methodological and technological advances within authentic medical learning environments The deteriorating patient smartphone app towards serious game design Medical health sciences educators and researchers in educational technology will look to Educational Technologies in Medical and Health Sciences Education to pinpoint current and future trends in an ever important field
