New Teacher Identity and Regulative Government Tony Brown, Olwen McNamara, 2006-03-30 This book seeks to address the question of how the task of teaching mathematics to young children might be better understood But rather than starting out with a conception of mathematics derived from the many histories mathematics might claim as its own we centre the analysis instead within the social practices that surround the teaching of the subject to children aged four to eleven in English primary schools today That is we do not commence with an a priori conception of mathematics and see what people are saying about it Rather we start from what people are saying and see where this points We probe how the desires of society have manifested themselves in a societal decision to teach mathematics and how this decision now shapes that which is called mathematics We focus on the operation of the noun mathematics and verb mathematical and consider how the meanings of these terms derive from the social domain in which they are being used This extends and develops a conception of how language intervenes in the task of mathematics education presented elsewhere Brown 2001 In this present book however we have a particular focus on trainee and newly qualified teachers with a view to pinpointing how this conception of mathematics manifests itself in their evolving practices We question how such teachers with many years of experience as a pupil in school might now re orient themselves towards the demands of teaching mathematics in schools Primary Mathematics

Educators Merrilyn Goos, Kim Beswick, 2021-04-07 Research in mathematics teacher education as a distinctive field of inquiry has grown substantially over the past 10-15 years. Within this field, there is emerging interest in how mathematics teacher educators (MTEs) themselves learn and develop. Until recently, there were few published studies on this topic, and the processes by which mathematics teacher educators learn and the forms of knowledge they require for effective practice had not been systematically investigated. However, researchers in mathematics education are now beginning to investigate the development of MTE expertise and associated issues. This volume draws on the latest research and thinking in this area; it is therefore timely to stimulate future development and directions. It will survey the emerging field of inquiry in mathematics education, combining the work of established scholars with perspectives of newcomers to the field, with the aim of influencing development of the field. It invites cross-cultural comparisons in becoming a mathematics teacher educator by highlighting issues in the development of MTEs in different countries and examines the roles of both mathematics educators and mathematicians in preparing future teachers of mathematics. The primary audience will be university-based mathematics teacher educators and MTE researchers and postgraduate research students who are seeking academic careers as MTEs. Additional interest may come from teacher educators in disciplines other than mathematics and education, policy makers responsible for accreditation and quality control of initial teacher education programs.
