Feminist Technology Linda L. Layne, Sharra Louise Vostral, Kate Boyer, 2010 Recognizing the different needs desires of women acknowledging the multiplicity of feminist approaches this work offers a debate on existing emergent technologies that share the goal of improving women's lives Re-visioning Science Education from Feminist Perspectives, 2010-01-01 Women in science education are placed in a juxtaposition of gender roles and gendered career roles Using auto biography and auto ethnography this book examines the challenges and choices of academic women in science education and how those challenges have changed or remained consistent since women have become a presence in science education The book's contributors span a temporal and spatial continuum and focus on how a variety of issues relate to the paradoxes for academic women in science education Science is characterized as a masculine endeavor while teaching is described as women's true profession Thus female academics involved in science education are positioned in two paradoxes First as teachers they are involved in a feminized profession However within that profession women faculty in science education work in a discipline viewed as a masculine enterprise Further these women work in educational institutions that have higher status and prestige than their sisters in elementary middle or high schools Second female professors are bearded mothers Women who have engaged in science education value rationality and logic and assume authority as participants in academe The use of logic the acceptance of authority and the assumption of power are masculine gender stereotyped characteristics This situation places women in a paradox because others including peers and students expect them to display stereotypic female gender dispositions such as mothering nurturing sacrificing their needs for others and a commitment to the institution The topics include discussing how their engagement with science impacted their career trajectories and re-direction from science to science education the relationships of cultural and racial factors on career trajectories and the dialectical relationship between women's private public lives and their agency collective and individual in the academy and its enactment within academic fields The book documents the lives and careers of academic women in science education from the United States Australia the Caribbean United Kingdom and Europe **Proceedings of the National Science Foundation Workshop on the Role of Faculty from the Scientific Disciplines in the Undergraduate Education of Future Science and Mathematics Teachers**, 1993 **The Bloomsbury Handbook of 21st-Century Feminist Theory** Robin Truth Goodman, 2019-02-07 The Bloomsbury Handbook of 21st Century Feminist Theory was a PROSE Award finalist The Bloomsbury Handbook of 21st Century Feminist Theory is the most comprehensive available survey of the state of the art of contemporary feminist thought With chapters written by world leading scholars from a range of disciplines the book explores the latest thinking on key topics in current feminist discourse including Feminist subjectivity from identity difference and

intersectionality to affect sex and the body Feminist texts writing reading genre and critique Feminism and the world from power trauma and value to technology migration and community Including insights from literary and cultural studies philosophy political science and sociology The Bloomsbury Handbook of 21st Century Feminist Theory is an essential overview of current feminist thinking and future directions for scholarship debate and activism Teaching Technology Frank Banks,2013-10-18 Technology is a new and rapidly changing area of the curriculum For experienced teachers in school as well as for students and novices it has involved the need for a whole new range of knowledge and skills in teaching This reader draws together already published articles and newly commissioned material from leading authors in the field to help teachers at all stages of their professional development to understand the principles which need to be considered whatever the detail of the National Curriculum in this subject It looks at the development of technology as a school subject at the ways in which pupils learn and teachers teach it and at its place within the wider contexts of education as a whole and of the society which technological developments help to shape *Resources in Education* ,1999-10 **Design and Feminism** Joan Rothschild,Alethea Cheng,1999 The distinction between the spaces considered public and private or work and home is becoming more blurred Our streets parks dwellings and tools are designed to a one size fits all standard and the responses of the design community to meet diverse needs have been mixed at best Design and Feminism offers feminist critiques of these inadequate design standards and suggest ideas projects and programs for change Technology and the Gendering of Music Education Dr Victoria Armstrong,2013-01-28 Critical of technologically determinist assumptions underpinning current educational policy Victoria Armstrong argues that this growing technicism has grave implications for the music classroom where composition is often synonymous with the music technology suite The use of computers and associated compositional software in music education is frequently decontextualized from cultural and social relationships thereby ignoring the fact that new technologies are used and developed within existing social spaces that are always already delineated along gender lines Armstrong suggests these gender technology relations have a profound effect on the ways adolescents compose music as well as how gendered identities in the technologized music classroom are constructed Drawing together perspectives from the sociology of science and technology studies STS and the sociology of music Armstrong examines the gendered processes and practices that contribute to how students learn about technology the repertoire of teacher and student talk its effect on student confidence and the issue of male control of technological knowledge Even though girls and female teachers have technological knowledge and skill the continuing material and symbolic associations of technology with men and masculinity contribute to the perception of women as less able and less interested in all things technological In light of the fact that music technology is now central to many music making practices across all sectors of education from primary secondary through to higher education this book provides a timely critical analysis that powerfully demonstrates why the relationship between gender and music technology should remain an important empirical consideration **Exploring Digital**
