Dwyer, Richard A. Coon, Paul H. Geissler, 1979 In this bibliography we have attempted to assemble the major portion of the technical literature on the American woodcock *Philohela minor* Included are scientific references published between 1927 and 1978 We chose 1927 as the cutoff date for early literature because of the importance of Arthur Cleveland Bent's work in 1927 and because most articles before 1927 are descriptive and do not add appreciably to the scientific literature on the species An excellent listing of the early literature may be found in the 1936 monograph by Olin Sewall Pettingill Jr No previously published bibliography devoted solely to woodcock is available References are listed alphabetically by author beginning on page 1 Following each reference is a number's that corresponds to one of the 22 subject headings listed on page iii

Industrial Engineering and the Engineering Digest, 1907 **Mariners' Adaptive Performance under Stress** Athanassiou, Georgios, 2016-10-12 *Mariners Adaptive Performance under Stress* focuses on the research question of direct and indirect effects of varying conditions of task integral cognitive and affective demands on adaptive performance of novice bridge operators The work draws theoretically on contextual models of cognition as well as appraisal theoretical frameworks of affect elicitation and experience The respective research hypotheses reflect expected individual and team related adaptive responses at and after the onset of ambiguous trigger events with a prominent affective component when performing a complex ship management task Adaptive performance was measured by means of behavioural parameters with a relevance to normal and critical operations Visual behaviour of officers of the watch Threat and Error

Management and Non Technical Skill performance of bridge crews and risk related crew decision making Additional surveys were employed for the assessment of the task related affective states and trigger event appraisals The results suggest that the observed adaptive performance especially on the team level is strongly affected by the co occurrence of constraining context conditions and the conspicuousness of the affective component of emerging events Consequently the work argues for an integrated approach towards combining cognition and affect for modelling human behaviour in dynamic environments It showcases the need for further research of cognition affect and their combined effects in the naturalistic context of work in order to comprehend the behaviour of the human element in practice beyond the obscuring veil of hindsight and outcome based evaluations
