## TECHNICAL REPORT SAMPLE

### RRM Opt 1: Congestion handling of DCH

#### 1.4 Introduction

Currently a DRNC accepting a dedicated RL, in principle needs to reserve resources for the maximum bitrate which could possibly be required for the DCH's on this RL. This because the DRNC has a very limited view on the load statistics of the DCH's (source descriptor) and has no possibility to control the DL-rate of the DCH's in congestion situations.

#### 1.5 Requirements

#### 1.6 Study areas

#### 1.7 Agreements and associated contributions

#### 1.8 Specification Impact and associated Change Requests

This section is intended to list the affected specifications and the related agreed Change Requests. It also lists the possible new specifications that may be needed for the completion of the Work Task.

#### 1.9 Open issues

#### 1.10 Introduction

Currently almost no procedure parallelism is allowed in NBAP/RNSAP (dedicated) procedures. As a result, an RRM procedure used for handling problems in a fast changing radio environment, could have to wait for termination of a procedure e.g. introducing a new service on the RL.

In order to improve the capability of the UTRAN to respond to fast changes in the radio environment, the restrictions on parallelism between procedures coping with radio environment changes (e.g. RL\_ADDITION/RL\_DELETION) and other procedures (e.g. RL\_RECONFIGURATION) should be decreased.
