conduct of economic analysis **The Economics of Nuclear Energy** L. G. Brookes, 2013-12-11 When we first contemplated a book on this subject we were faced with a number of options a to write it all ourselves which would have had the merit of internal consistency and continuity of style b to produce a collection of existing papers which would have given us expert views in the various sub fields of the economics of nuclear energy and would have put us in the position of knowing from the start exactly what the authors contributions would be c to commission contributions from individual specialists chapter by chapter or d some combination of these options We settled for the last we have written some of the material ourselves have obtained permission to use some existing papers that seem to us to be valuable contributions to the subject and have been fortunate in persuading a number of eminent people in their fields to produce papers especially for the book This has given us a great deal of work and taken up more time than we planned for but we believe the result justifies this time and effort It enabled us to design a structure for the book from the outset recognizing that there are several aspects to the economics of nuclear energy especially if we take a broad view of what is embraced by the word economics **An Introduction to Industrial Economics** P.J. The Emergence of Routines Daniel M. G. Raff, Philip Scranton, 2016-12-06 This book is a collection of essays about the emergence of routines and more generally about getting things organized in firms and in industries in early stages and in transition These are subjects of the greatest interest to students of entrepreneurship and organizations as well as to business historians but the academic literature is thin The chronological settings of the book's eleven substantive chapters are historical reaching as far back as the late 1800s right up to the 1990s but the issues they raise are evergreen and the historical perspective is exploited to advantage The chapters are organized in three broad groups examining the emergence of order and routines in initiatives studying the same subject in ongoing operations and a third focusing specifically on the phenomena of transition The topics range from the Book of the Month Club to industrial research at Alcoa from the evolution of procurement and coordination to project based industries such as bridge and dam building and the governance of defence contracting and from the development of project performance appraisal at the World Bank to the way the global automobile industry collectively redesigned the internal combustion engine to deal with after the advent of environmental regulation The chapters are vivid and thought provoking in themselves and for pedagogical purposes offer excellent jumping off points for discussion of relevant experiences and cognate academic literature
