Techniques in Clinical Immunology Ronald Augustine Thompson, 1977 Immunological Techniques Made Easy Olivier Cochet, Jean-Luc Teillaud, Catherine Sautès, 1998-08-17 Immunological Techniques Made Easy Edited by Olivier Cochet Biotechnology and Antibody Laboratory Jean Luc Teillaud and Catherine Saut s INSERM Laboratory of Cellular and Clinical Immunology Institut Curie Paris France Here at last is a clear and concise guide to 100 of the most commonly used immunological techniques that can easily be performed by non immunologists and which assumes no prior knowledge of the techniques described The idea for this book arose from the authors observations that scientists in many fields of biomedical research needed at some time or another to perform an immunological technique applied to their own specific field of research Existing manuals of immunological techniques are intended primarily for research immunologists and are either too detailed or assume background expertise that the user may not necessarily possess Each technique is described step by step in an easy to follow format much like a cooking recipe and is abundantly illustrated to give the user a clear understanding of what is happening at each stage The book is edited by three experienced immunologists from the Curie Institute in Paris who have brought together an international panel of contributors all of whom have hands on expertise of the techniques they describe Conveniently spiral bound for easy use at the laboratory bench the book will be a valuable resource for scientists who want a readily accessible reference to be able to perform immunological techniques successfully and painlessly

Regulatory Writing Techniques: Clinical Documents for Drugs and Biologics Linda Fossati Wood,MaryAnn Foote,2009-01-05 This book describes the authors standard or best practices used in writing regulated clinical documents for the drug and biologics industry The fundamental premise of this book is that the end documents submitted to a health authority is dependent on the beginning the planning and strategy that go into organizing written documentation Each regulatory document inherently exists within a constellation of related documents This book attempts to show the relationships between and among these documents and suggests strategies for organizing and writing these documents to maximize efficiency while developing clear and concise text At all times and irrespective of applicable laws and guidelines

good communication skills and a sense of balance are essential to adequately accurately and clearly describe a product's characteristics. At no time should the reader perceive these suggestions to be the only viable solution to writing regulatory documents nor should the reader expect that these suggestions guarantee product success. The audience for this book is the novice medical writer or those who would like to explore or enhance regulatory writing skills. We assume the reader will have a basic understanding of written communication but little experience in applying this skill to the task of regulatory writing. Extensive knowledge of science, clinical medicine, mathematics or regulatory affairs law is not required to use the best practices described in this book.

Testing Z. Parvez, 2012-12-06 Rapid progress in analytical methods within the past few decades has led to the widespread applications of newer immunological and radioimmunoassay techniques to the diagnosis and treatment of hemorrhagic and thrombotic disorders Major advances were made to meet the multiple challenges of improving precision accuracy and availability of various measurements These advances have been paralleled by the discoveries of a close relationship between biological activities and the absolute concentration of proteins that were measured by immunological techniques This in turn assured the significance and usefulness of immunological methods in the management of patients Numerous variants of immunological tests now are available which allow us to both determine with precision minute quantities of antigenic proteins in serum and other biological fluids and differentiate the native protein from its genetically altered or degraded forms Methods also have been designed to immunologically evaluate some serine proteases that are in complex with proteolytic inhibitors Due to rapid progress in this field different laboratories unavoidably become experts in one or the other approach In the welter of possible choices the non expert usually is left to follow either the most recent but as yet to be confirmed method or his own anecdotal experience This manual not only brought together various methods in current use but it also set certain standardized criteria for the assessment of various deficiencies and abnormalities in hemostasis
