- ⊗ The invention of the steam engine
- ⊗ Industrial Revolution started around 1750, first in Britain
- ⊗ Machinery with advanced sources of energy (water, steam, internal combustion engine, electricity, nuclear power, telecommunication)
- ⊗ The pace of social change became much faster with industrialism. Societies transformed more in a century than in several thousand years before.
- ⊗ Division of labor in society became very complex
- ⊗ Initially, social inequalities became greater, first within the industrial countries of the West, then, between Western and non-western societies.
- ⊗ But in the 20th century, inequality within Western societies diminished, as workers and women got rights
- ⊗ Global inequalities between Western and non-Western societies have diminished in some ways, but have not been removed.

*The Sociology of Invention* S. Colum Gilfillan, 1970-01 The social factors that spur inventiveness and the social effects of inventions were treated at book length for the first time in this work originally published in 1935 The author develops his presentation on the basis of 38 explicitly stated propositions The author writes That invention is an important subject for modern mankind to understand and perhaps later improve all will agree That invention is partly caused hampered promoted steered by social factors and institutions such as wealth or the patent system and not simply by developments in the physical sciences and industrial practice will also be allowed How great is the social causation we shall discuss Likewise that inventions have wide social and not simply industrial effects has been common knowledge for nigh a century There would seem then every call for a treatise on the Sociology of Invention Yet not one book with this definitive field has been published in any language Our problem is to combine those two worlds of that which have so rarely been conjoined social science and engineering in order to produce a rather new and fertile hybrid a Sociology of Invention It is a difficult problem this getting people to study and think in an unfamiliar world and we have tried to solve it for some readers and dodge it for most

Nelson, 1959 A selective summary of the literature on the economics of invention Both growing social demand and new scientific knowledge are examined as factors stimulating inventive effort The comparative importance of the private inventor and the research and development laboratory are appraised The study stresses the great uncertainties which still surround any inventive effort seeking a significant advance and investigates how this uncertainty affects management practices in industrial research laboratories The general analysis is supported by a number of case studies

**The Nature of Technological Knowledge. Are Models of Scientific Change Relevant?** L. Laudan, 1984-04-30 One of the ironies of our time is the sparsity of useful analytic tools for understanding change and development within technology itself For all the diatribes about the disastrous effects of technology on modern life for all the equally uncritical paeans to technology as the panacea for human ills the vociferous pro and anti technology movements have failed to illuminate the nature of technology On a more scholarly level in the midst of claims by Marxists and non Marxists alike about the technological underpinnings of the major social and economic changes of the last couple of centuries and despite advice given to government and industry about managing science and technology by a small army of consultants and policy analysts technology itself remains locked inside an impenetrable black box a *deus ex machina* to be invoked when all other explanations of puzzling social and economic phenomena fail The discipline that has probably done most to penetrate that black box in recent years by studying the internal development of technology is history Historians of technology and certain economic historians have carried out careful and detailed studies on the genesis and impact of technological innovations and the structure of the social systems associated with those innovations Within the past few decades tentative consensus about the periodization and the major traditions within the history of technology has begun to emerge at least as far as Britain and America in the eighteenth and nineteenth century are concerned

**Moses Dobruska and the Invention of Social Philosophy** Silvana Greco, 2022-01-19 This book proposes for the first time an in depth analysis of the *Philosophie sociale* published in Paris in 1793 by Moses Dobruska 1753 1794 Dobruska was a businessman scholar and social philosopher born into a Jewish family in Moravia who converted to Catholicism gained wide recognition at the Habsburg court in Vienna and then emigrated to France to join the French Revolution Dobruska who took on the name Junius Frey during his Parisian sojourn barely survived his book Accused of conspiring on behalf of foreign powers he was guillotined on April 5 1794 at the height of The Terror on the same day as Georges Jacques Danton From Dobruska's ideas which were widely used between the late eighteenth century and the first decades of the nineteenth century without attribution to their author emerge some of the key concepts of the social sciences as we know them today An enthusiastic and unfortunate revolutionary and sometimes a brilliant theorist Moses Dobruska deserves a role of his own in the history of sociology Click here for a video book presentation by the author
