

## Lack of effect of specific sodium hunger on learned aversions to sodium and sucrose

AVA M. TRENT and JAMES W. KALAT  
*Duke University, Durham, North Carolina 27706*

Frumkin (1975) reported that sodium-deficient rats fail to learn taste aversions to NaCl. However, those rats were sodium-deficient at the time of testing as well as at the time of training; any learned aversion could have been masked by a strong sodium hunger. Rats were made temporarily sodium-hungry by injections of Formalin or aldosterone. They were then poisoned after drinking both an NaCl and a sucrose solution. Several days later they were tested for learned aversions. Rats trained under the influence of aldosterone did not differ from controls. Rats trained under the influence of Formalin acquired slightly weaker aversions to both NaCl and sucrose. Thus there is no evidence that sodium deficiency alters the associability of NaCl with poison.

Rats which are poisoned after ingesting some substance acquire an aversion to the taste of that substance (Garcia, Ervin, & Koelling, 1966; Garcia & Koelling, 1966; Rozin & Kalat, 1971). If a rat drinks more than one solution prior to poisoning, it may acquire a stronger aversion to one solution than to the other (Kalat & Rozin, 1970). One determinant of the salience of various tastes in this situation is their novelty; rats which drink two solutions prior to poisoning acquire a stronger aversion to the more novel solution (Kalat, 1974; Revusky & Bedarf, 1967).

Frumkin (1975) has recently proposed an additional determinant of how associable a taste is with poison. He reported that sodium-deficient rats learned much weaker aversions than normal rats if the taste of NaCl was paired with poison. Similarly, calcium-deficient rats learned weaker than normal aversions if calcium was paired with poison. Such results suggest a possible predisposition of rats to avoid associating a taste with poison while they have a specific hunger for that taste.

However, another, less interesting, interpretation is possible. Frumkin produced sodium deficiency and calcium deficiency by removal of the adrenal and parathyroid glands, respectively. Because these removals are permanent, the rats were sodium- or calcium-deficient at the time of testing as well as the time of training. It is certainly possible that these rats had learned aversions to sodium or calcium, but that the specific hungers for these minerals overrode the aversions (see Cullen, 1969; Rozin & Kalat, 1971; Stricker & Wilson, 1970). For analogy, if an experi-

menter paired breathing with shock and the animals failed to stop breathing, it would not be proper to conclude that they had failed to learn.

In order to test the effect of sodium hunger on the associability of sodium with poison, it would be best to produce a temporary sodium hunger which could be present at the time of training but absent during the test. In Experiment 1, we produced temporary sodium deficiency by injections of Formalin. In Experiment 2, we produced sodium hunger without sodium deficiency by injections of aldosterone.

The experiments were designed to minimize one other possible problem in the interpretation of results. Suppose that sodium-deficient rats learned either a stronger or a weaker aversion to NaCl than the normal rats. A possible interpretation would be that the poison was either more aversive or less aversive, respectively, to the sodium-deficient rats. (The latter possibility is not totally implausible. It could be that when a rat is already ill, a further increase in illness might be less significant to the rat than if the rat had previously been healthy.) To avoid this problem, we poisoned sodium-hungry rats after they drank both a sucrose solution and an NaCl solution. We could conclude that sodium hunger altered the associability of NaCl only if the sodium-hungry rats showed either a stronger or weaker NaCl aversion than the controls, *without* showing a correspondingly stronger or weaker aversion to sucrose.

### EXPERIMENT 1

#### Method

The subjects were 40 adult female rats, mean weight 285 g, which had been born and reared in the authors' laboratory. The ancestry was mixed, consisting mostly of Sprague-Dawley albino; however, pigmented rats were used preferentially for breeding.

## **Sodium Hunger:**

*Calcium Hunger* Jay Schulkin, 2001 This book brings together the behavioral physiological and neuroendocrine regulation of calcium An understanding of how the brain orchestrates whole body demands for calcium is introduced The approach is one in which behavior in addition to physiology serves bodily maintenance The book links basic and clinical literature surrounding calcium homeostasis as a wide variety of clinical syndromes are tied to calcium metabolism Because calcium is so important during life stages particular to women an emphasis is placed on the relevance of calcium to women's health throughout the book though not exclusively since calcium is fundamental to both sexes *Sodium Hunger* Jay Schulkin, 1991 The hunger for sodium has been used as a model system in which to study how the brain produces motivated behaviour In this account of the field Jay Schulkin draws together information across a range of disciplines and topics ranging from the ecology of salt ingestion to the sodium molecule and the action of various hormones The phenomenon of sodium hunger was discovered by Curt Richter the great American psychobiologist over 50 years ago Its study has been of interest for some time to naturalists psychologists endocrinologists physiologists and neuroscientists This book offers a systematic account of the behaviour of the sodium hungry animal the endocrine and physiological mechanisms that act to maintain sodium balance and then act on the brain to promote the search for and the ingestion of salt Finally the book provides a description of a neural network that orchestrates the behaviour of salt seeking and salt ingestion Graduate students and research workers in psychology physiology and neuroscience will find valuable information in this review *The Neuroendocrine Regulation of Behavior* Jay Schulkin, 1999 In this text Jay Schulkin discusses and emphasizes the important roles of steroids and neuropeptides in the regulation of behavior The guiding principle behind much of the research and insights that are presented in the book is the concept of using certain model animal systems to study how hormones influence the brain The results from these model systems can then be used to generalize the information obtained and apply it to other animals and humans Senior undergraduate and graduate students in neuroscience endocrinology psychology and physiology will find this text a useful guide to the role of hormones in behavior It should be of use to colleagues in the field and medical health care professionals *Neurobiology of Body Fluid Homeostasis* Laurival Antonio De Luca Jr., Jose Vanderlei Menani, Alan Kim Johnson, 2013-10-01 A timely symposium entitled Body Fluid Homeostasis Transduction and Integration was held at Araraquara S o Paulo Brazil in 2011 This meeting was convened as an official satellite of a joint gathering of the International Society for Autonomic Neuroscience ISAN and the American Autonomic Society AAS held in Buzios Rio de Janeiro Broad international participation at this event generated stimulating discussion among the invited speakers leading to the publication of *Neurobiology of Body Fluid Homeostasis Transduction and Integration* Drawn from the proceedings and filled with rich examples of integrative neurobiology and regulatory physiology this volume Provides updated research using human and animal models for the control of bodily fluids thirst and salt appetite Explores neural and endocrine control of

Motivation Roderick Wong,2000-07-03 This book presents an analysis of motivated behaviour from a biological perspective Thirst David J. Ramsay,David Booth,2012-12-06 At one time or another everyone has said I am thirsty Yet what causes this sensation of thirst It is obvious that a certain quantity of fluid must be present for the body to function normally How does a water deficit in the body then influence drinking habits But supposing the physiological need is met what about the psychological need or social need Water is certainly the most necessary fluid then why do we humans often

prefer other beverages even at great cost of effort or money or health The subject of thirst and drinking behavior are uniquely discussed in this book For the first time both the physiological and the psychological aspects of water and beverage consumption are examined in one volume The many recent developments concerning how a lack of water is signalled physiologically and processed neurally to affect drinking behavior are critically surveyed Prospects for understanding the cultural and sensory influences on beverage consumption are mapped out The thirty one chapters by authorities in the field were all mutually reviewed and revised in the light of precirculated comments and round table discussions Together they provide a complete picture of the current state of knowledge on what determines fluid consumption in human beings and animals

*Taste* Lloyd M. Beidler, 2012-12-06 Taste receptors monitor the quality of all the food ingested They are intimately involved in both food acceptance and rejection The sensation of taste is also important in the regulation of many specific chemicals necessary for maintenance of the body For example disturbance of the adrenal glands results in a change in the intake of salt which is necessary for regulation of the sodium balance Curt Richter s early studies on specific hungers and preference thresholds initiated a large number of studies in this field The relationship between taste and food intake is now well recognized by physiologists psychologists and nutritionists Our current concepts of the neural coding of taste quality and intensity are largely based upon the classical paper by
