Soft Computing For Reservoir Characterization And Modeling:

Soft Computing for Reservoir Characterization and Modeling Patrick Wong, Fred Aminzadeh, Masoud Nikravesh, 2013-11-11 In the middle of the 20th century Genrich Altshuller a Russian engineer analysed hundreds of thousands of patents and scientific publications From this analysis he developed TRIZ G Altshuller 40 Principles TRIZ Keys to Technical Innovation TRIZ Tools Volume 1 First Edition Technical Innovation Center Inc Worcester MA January 1998 Y Salamatov TRIZ The Right Solution at the Right Time A Guide to Innovative Problem Solving Insytex B V 1999 the theory of inventive problem solving together with a series of practical tools for helping engineers solving technical problems Among these tools and theories the substance field theory gives a structured way of representing problems the patterns of evolution show the lifecycle of technical systems the contradiction matrix tells you how to resolve technical contradictions using the forty principles that describe common ways of improving technical systems For example if you want to increase the strength of a device without adding too much extra weight to it the contradiction matrix tells you that you can use Principle 1 Segmentation or Principle 8 Counterweight or Principle 15 Dynamicity or Principle 40 Composite Materials I really like two particular ones Principle 1 Segmentation and Principle 15 Dynamicity Segmentation shows how systems evolve from an initial monolithic form into a set of independent parts then eventually increasing the number of parts until each part becomes small enough that it cannot be identified anymore

Evolving Rule-Based Models Plamen P. Angelov, 2013-03-20 The idea about this book has evolved during the process of its preparation as some of the results have been achieved in parallel with its writing One reason for this is that in this area of research results are very quickly updated Another is possibly that a strong unchallenged theoretical basis in this field still does not fully exist From other hand the rate of innovation competition and demand from different branches of industry from biotech industry to civil and building engineering from market forecasting to civil aviation from robotics to emerging e commerce is increasingly pressing for more customised solutions based on learning consumers behaviour A highly interdisciplinary and rapidly innovating field is forming which focus is the design of intelligent self adapting systems and machines It is on the crossroads of control theory artificial and computational intelligence different engineering disciplines borrowing heavily from the biology and life sciences It is often called intelligent control soft computing or intelligent technology Some other branches have appeared recently like intelligent agents which migrated from robotics to different engineering fields data fusion knowledge extraction etc which are inherently related to this field The core is the attempts to enhance the abilities of the classical control theory in order to have more adequate flexible and adaptive models and control algorithms

Fuzzy Partial Differential Equations and Relational Equations Masoud Nikraves, Lofti A. Zadeh, Victor Korotkikh, 2014-03-12 During last decade significant progress has been made in the oil industry by using soft computing technology Underlying this evolving technology there have been ideas transforming the very language we use to describe problems with imprecision uncertainty and partial truth These developments offer exciting opportunities but at the same

time it is becoming clearer that further advancements are confronted by fundamental problems. The whole idea of how human process information lies at the core of the challenge. There are already new ways of thinking about the problems within theory of perception based information. This theory aims to understand and harness the laws of human perceptions to dramatically improve the processing of information. A matured theory of perception based information is likely to be properly positioned to contribute to the solution of the problems and provide all the ingredients for a revolution in science, technology, and business. In this context, Berkeley Initiative in Soft Computing (BISC), University of California Berkeley, from one side and Chevron Texaco from another, formed a Technical Committee to organize a Meeting entitled State of the Art Assessment and New Directions for Research to understand the significance of the field's accomplishments, new developments, and future directions. The Technical Committee selected and invited 15 scientists and industry experts as technical committee members from the related disciplines to participate in the Meeting, which took place at the University of California Berkeley and March 15-17, 2002.

Towards Efficient Fuzzy Information Processing Chongfu Huang, Yong Shi, 2012-11-03. When we learn from books or daily experience, we make associations and draw inferences on the basis of information that is insufficient for understanding. One example of insufficient information may be a small sample derived from observing experiments. With this perspective, the need for developing a better understanding of the behavior of a small sample presents a problem that is far beyond purely academic importance. During the past 15 years, considerable progress has been achieved in the study of this issue in China. One distinguished result is the principle of information diffusion. According to this principle, it is possible to partly fill gaps caused by incomplete information by changing crisp observations into fuzzy sets so that one can improve the recognition of relationships between input and output. The principle of information diffusion has been proven successful for the estimation of a probability density function. Many successful applications reflect the advantages of this new approach. It also supports an argument that fuzzy set theory can be used not only in soft science where some subjective adjustment is necessary but also in hard science where all data are recorded.

Enhance Oil and Gas Exploration with Data-Driven Geophysical and Petrophysical Models Keith R. Holdaway, Duncan H. B. Irving, 2017-10-04.
