Software Engineering With Obj Algebraic Specification In Action:

Software Engineering with OBJ Joseph A. Goguen, Grant Malcolm, 2013-11-11 Software Engineering with OBJ Algebraic Specification in Action is a comprehensive introduction to OBJ the most widely used algebraic specification system As a formal specification language OBJ makes specifications and designs more precise and easier to read as well as making maintenance easier and more accurate OBJ differs from most other specification languages not just in having a formal semantics but in being executable either through symbolic execution with term rewriting or more generally through theorem proving One problem with specifications is that they are often wrong OBJ can help validate specifications by executing test cases and by proving properties As well as providing a detailed introduction to the language and the OBJ system that implements it Software Engineering with OBJ Algebraic Specification in Action provides case studies by leading practitioners in the field in areas such as computer graphics standards hardware design and parallel computation The case studies demonstrate that OBJ can be used in a wide variety of ways to achieve a wide variety of practical aims in the system development process The papers on various OBJ systems also demonstrate that the language is relatively easy to understand implement and use and that it supports formal reasoning in a straightforward but powerful way Software Engineering with OBJ Algebraic Specification in Action will be of interest to students and teachers in the areas of data types programming languages semantics theorem proving and algebra as well as to researchers and practitioners in software engineering

Semantics and Algebraic Specification Jens Palsberg, 2009-08-28 This Festschrift volume published to honor Peter D Mosses on the occasion of his 60th birthday includes 17 invited chapters by many of Peter's coauthors collaborators close colleagues and former students Peter D Mosses is known for his many contributions in the area of formal program semantics In particular he developed action semantics a combination of denotational operational and algebraic semantics The presentations given on a symposium in his honor in Udine Italy on September 10 2009 were on subjects related to Peter's many technical contributions and they were a tribute to his lasting impact on the field Topics addressed by the papers are action semantics security policy design colored petri nets order sorted parameterization and induction object oriented action

 Meseguer, 2006-06-21 This volume honoring the computer science pioneer Joseph Goguen on his 65th Birthday includes 32
 refereed papers by leading researchers in areas spanned by Goguen's work The papers address a variety of topics from
 meaning meta logic specification and composition behavior and formal languages as well as models deduction and
 computation by key members of the research community in computer science and other fields connected with Joseph Goguen's
 work *Models, Algebras and Logic of Engineering Software* Manfred Broy, Markus Pizka, 2003 This volume focuses on the
 education of researchers teachers students and practitioners As usual in engineering a study and application of the relevant
 branches of mathematics is crucial both in education and practice **Modular Specification and Verification of
 Object-Oriented Programs** Peter Müller, 2003-07-31 Software systems play an increasingly important role in modern
 societies Smart cards for personal identification e banking software controlled mechanical tools airbags in cars and autopilots for
 aircraft control are only some examples that illustrate how everyday life depends on the good behavior of software
 Consequently techniques and methods for the development of high quality dependable software systems are a central research
 topic in computer science A fundamental approach to this area is to use formal specification and verification Specification
 languages allow one to describe the crucial properties of software systems in an abstract mathematically precise and
 implementation independent way By formal verification one can then prove that an implementation really has the desired
 specified properties Although this formal methods approach has been a research topic for more than 30 years its practical
 success is still restricted to domains in which development costs are of minor importance Two aspects are crucial to widen the
 application area of formal methods Formal specification techniques have to be smoothly integrated into the software and
 program development process The techniques have to be applicable to reusable software components This way the quality
 gain can be exploited for more than one system thereby justifying the higher development costs Starting from these
 considerations Peter Müller has developed new techniques for the formal specification and verification of object oriented soft-
 ware The specification techniques are declarative and implementation independent They can be used for object oriented design
 and programming **Logic, Rewriting, and Concurrency** Narciso Martí-Oliet, Peter Csaba Ölveczky, Carolyn
 Talcott, 2015-08-26 This Festschrift volume contains 28 refereed papers including personal memories essays and regular
 research papers by close collaborators and friends of José Meseguer to honor him on the occasion of his 65th birthday These
 papers were presented at a symposium at the University of Illinois at Urbana Champaign on September 23-25 2015 The
 symposium also featured invited talks by Claude and Hilarie Kirchner and by Patrick Lincoln The foreword of this volume adds
 a brief overview of some of José's many scientific achievements followed by a bibliography of papers written by José

Algebraic Foundations of Systems Specification Egidio Astesiano, Hans-Jörg Kreowski, Bernd Krieg-Brückner, 2012-12-06 The aim of software engineering is the provision and investigation of methods for the development of software systems of high quality with correctness as a key issue A system is called correct if it does what one wants if it meets the requirements To achieve and to guarantee correct systems the need of formal methods with rigorous semantics and the possibility of verification is widely accepted Algebraic specification is a software engineering approach of this perspective When Liskov and Zilles Guttag and the ADJ group with Goguen Thatcher Wagner and Wright introduced the basic ideas of algebraic specification in the mid seventies in the U S A and Canada they initiated a very successful and still flourishing new area In the late seventies algebraic specification became a major research topic also in many European countries Originally the algebraic framework was intended for the mathematical foundation of abstract data types and the formal development of first order applicative programs Meanwhile the range of applications has been extended to the precise specification of complete software systems the uniform definition of syntax and semantics of programming languages and to the stepwise development of correct systems from the requirement definitions to the running programs The activities in the last 25 years have led to an abundance of concepts methods approaches theories languages and tools which are mathematically founded in universal algebra category theory and logic

Computer-Aided Reasoning Matt Kaufmann, Panagiotis Manolios, J Strother Moore, 2012-12-06 Computer Aided Reasoning An Approach is a textbook introduction to computer aided reasoning It can be used in graduate and upper division undergraduate courses on software engineering or formal methods It is also suitable in conjunction with other books in courses on hardware design discrete mathematics or theory especially courses stressing formalism rigor or mechanized support It is also appropriate for courses on artificial intelligence or automated reasoning and as a reference for business and industry Current hardware and software systems are often very complex and the trend is towards increased complexity Many of these systems are of critical importance therefore making sure that they behave as expected is also of critical importance By modeling computing systems mathematically we obtain models that we can prove behave correctly The complexity of computing systems makes such proofs very long complicated and error prone To further increase confidence in our reasoning we can use a computer program to check our proofs and even to automate some of their construction In this book we present A practical functional programming language closely related to Common Lisp which is used to define functions which can model computing systems and to make assertions about defined functions A formal logic in which defined functions correspond to axioms the logic is first order includes induction and allows us to prove theorems about the functions The computer aided reasoning system ACL2 which includes the programming language the logic and mechanical support for the proof process The ACL2 system has been successfully applied to projects of commercial interest including microprocessor modeling hardware verification microcode verification and software verification This book gives a methodology for modeling computing systems formally and for reasoning about those models with mechanized assistance The practicality of computer aided reasoning is further demonstrated in the companion book Computer Aided Reasoning ACL2 Case Studies Approximately 140 exercises are distributed throughout the book Additional material is freely available from the ACL2 home page on the Web including solutions to the exercises additional exercises case studies from the companion book research papers and the ACL2 system with detailed documentation
