Reading and Learning Andreas Dengel, Markus Junker, Anette Weisbecker, 2004-04-16 The amounts of information that are flooding people both at the workplace and in private life have increased dramatically in the past ten years The number of paper documents doubles every four years and the amount of information stored on all data carriers every six years New knowledge however increases at a considerably lower rate Possibilities for automatic content recognition in various media and for the processing of documents are therefore becoming more important every day Especially in economic terms the efficient handling of information i.e. getting the right information at the right time is an invaluable resource for any enterprise but it is particularly important for small and medium sized enterprises The market for document management systems which in Europe had a volume of approximately 5 billion euros in 2000 will increase considerably over the next few years The BMBF recognized this development at an early stage As early as in 1995 it pooled national capabilities in this field in order to support research on the automatic processing of information within the framework of a large collaborative project READ involving both industrial companies and research centres Evaluation of the results led to the conclusion that research work had been successful and in a second phase funding was provided for the collaborative follow up project Adaptive READ from 1999 to 2003 The completion of these two important long term research projects has contributed substantially to improving the possibilities of content recognition and processing of handwritten printed and electronic documents

Component-Based Software Quality Alejandra Cechich, Mario Piattini, 2003-06-26 Component based software development CBSD is no longer just one more new

paradigm in software engineering but is effectively used in development and practice So far however most of the efforts from the software engineering community have concentrated on the functional aspects of CBSD leaving aside the treatment of the quality issues and extra functional properties of software components and component based systems This book is the first one focusing on quality issues of components and component based systems The 16 revised chapters presented were carefully reviewed and selected for inclusion in the book together with an introductory survey they give a coherent and competent survey of the state of the art in the area The book is organized in topical parts on COTS selection testing and certification software component quality models formal models to quality assessment and CBSD management **Software**

Product Lines Timo Käkölä, Juan Carlos Dueñas, 2007-02-07 Between July 1999 and June 2005 a group of European companies research institutes and universities executed the EUREKA ITEA projects ESAPS CAF and FAMILIES on the topic of product line engineering The projects originated from the need of the industry to improve software engineering performance by organizing product development in product lines The results obtained within the projects have been implemented in several large industries e g automotive e business medical systems and mobile phones They involve a radical shift in software construction and production The most important research results of the projects are collected in this book Product line engineering was already applied within industry in the 1980s and presumably earlier In the 1980s good architects in many telecommunications companies based their architectures on the ideas of David Parnas who published on the subject of program families They were facilitated by the CHILL language widely used by the telecommunications companies This language deploys the same modularity principles as the Modula programming language family Modularity is a crucial ingredient for implementing systems with a component based architecture Being able to compose the products of components is an important mechanism in all product line architectures In the 1990s the product line ideas started to gain ground in other industries Around 1995 the company experiences reached the academia and since then people in companies and academia have collaborated widely on this subject The ESAPS CAF and FAMILIES projects manifest an institutionalized form of this collaboration [Handbook of Research on Software Engineering and Productivity Technologies: Implications of Globalization](#) Ramachandran, Muthu, de Carvalho, Rogério Atem, 2009-08-31 This book provides integrated chapters on software engineering and enterprise systems focusing on parts integrating requirements engineering software engineering process and frameworks productivity technologies and enterprise systems Provided by publisher **Software Engineering**

with Reusable Components Johannes Sametinger, 2013-04-17 Software is rarely built completely from scratch To a great extent existing software documents source code design documents etc are copied and adapted to fit new requirements Yet we are far from the goal of making reuse the standard approach to software development Software reuse is the process of creating software systems from existing software rather than building them from scratch Software reuse is still an emerging discipline It appears in many different forms from ad hoc reuse to systematic reuse and from white box reuse to black box

reuse Many different products for reuse range from ideas and algorithms to any documents that are created during the software life cycle Source code is most commonly reused thus many people misconceive software reuse as the reuse of source code alone Recently source code and design reuse have become popular with object oriented class libraries application frameworks and design patterns Software components provide a vehicle for planned and systematic reuse The software community does not yet agree on what a software component is exactly Nowadays the term component is used as a synonym for object most of the time but it also stands for module or function Recently the term component based or component oriented software development has become popular In this context components are defined as objects plus something What something is exactly or has to be for effective software development remains yet to be seen However systems and models are emerging to support that notion

Introduction to Software Engineering Ronald J. Leach, 2018-09-03 Practical Guidance on the Efficient Development of High Quality Software Introduction to Software Engineering Second Edition equips students with the fundamentals to prepare them for satisfying careers as software engineers regardless of future changes in the field even if the changes are unpredictable or disruptive in nature Retaining the same organization as its predecessor this second edition adds considerable material on open source and agile development models The text helps students understand software development techniques and processes at a reasonably sophisticated level Students acquire practical experience through team software projects Throughout much of the book a relatively large project is used to teach about the requirements design and coding of software In addition a continuing case study of an agile software development project offers a complete picture of how a successful agile project can work The book covers each major phase of the software development life cycle from developing software requirements to software maintenance It also discusses project management and explains how to read software engineering literature Three appendices describe software patents command line arguments and flowcharts

Software Product Lines Patrick Donohoe, 2012-12-06 Software product lines are emerging as a critical new paradigm for software development Product lines are enabling organizations to achieve impressive time to market gains and cost reductions With the increasing number of product lines and product line researchers and practitioners the time is right for a comprehensive examination of the issues surrounding the software product line approach The Software Engineering Institute at Carnegie Mellon University is proud to sponsor the first conference on this important subject This book comprises the proceedings of the First Software Product Line Conference SPLC1 held August 28 31 2000 in Denver Colorado USA The twenty seven papers of the conference technical program present research results and experience reports that cover all aspects of software product lines Topics include business issues enabling technologies organizational issues and life cycle issues Emphasis is placed on experiences in the development and fielding of product lines of complex systems especially those that expose problems in the design development or evolution of software product lines The book will be essential reading for researchers and practitioners alike

Formal

Approaches to Software Testing Jens Grabowski, Brian Nielsen, 2005-02-22 Testing often accounts for more than 50% of the required effort during system development. The challenge for research is to reduce these costs by providing new methods for the specification and generation of high quality tests. Experience has shown that the use of formal methods in testing represents a very important means for improving the testing process. Formal methods allow for the analysis and interpretation of models in a rigorous and precise mathematical manner. The use of formal methods is not restricted to system models only. Test models may also be examined. Analyzing system models provides the possibility of generating complete test suites in a systematic and possibly automated manner, whereas examining test models allows for the detection of design errors in test suites and their optimization with respect to readability or compilation and execution time. Due to the numerous possibilities for their application, formal methods have become more and more popular in recent years.

The Formal Approaches in Software Testing FATES workshop series also benefits from the growing popularity of formal methods. After the workshops in Aalborg, Denmark (2001), Brno, Czech Republic (2002), and Montreal, Canada (2003), FATES 2004 in Linz, Austria, was the fourth workshop of this series. Similar to the workshop in 2003, FATES 2004 was organized in a liaison with the IEEE ACM Conference on Automated Software Engineering (ASE 2004). FATES 2004 received 41 submissions. Each submission was reviewed by at least three independent reviewers from the Program Committee, with the help of some additional reviewers. Based on their evaluations, 14 full papers and one work-in-progress paper from 11 different countries were selected for presentation.

Software Process Improvement: Metrics, Measurement, and Process Modelling Michael Haug, Eric W. Olsen, Lars Bergman, 2011-06-28. Commissioned by the Directorate General Information Society, European Commission, Brussels. Under the 4th Framework of European Research, the European Systems and Software Initiative (ESSI) was part of the ESPRIT Programme. This initiative funded more than 470 projects in the area of software and system process improvements. The majority of these projects were process improvement experiments carrying out and taking up new development processes, methods, and technology within the software development process of a company. In addition, nodes, centres of expertise, European networks, organisations managing local activities, training, and dissemination actions complemented the process improvement experiments. ESSI aimed at improving the software development capabilities of European enterprises. It focused on best practice and helped European companies to develop world class skills and associated technologies to build the increasingly complex and varied systems needed to compete in the marketplace. The dissemination activities were designed to build a forum at European level to exchange information and knowledge gained within process improvement experiments. Their major objective was to spread the message and the results of experiments to a wider audience through a variety of different channels. The European Experience Exchange (URX) project has been one of these dissemination activities within the European Systems and Software Initiative. URX has collected the results of practitioner reports from numerous workshops in Europe and presents in this series of books the results of Best Practice achievements in European Companies.
