The initial ideas behind this edited volume started in spring of 1998 some two years before the sixtieth birthday of Bernard P Zeigler The idea was to bring together distinguished researchers colleagues and former students of Professor Zeigler to present their latest findings at the AIS 2000 conference During the spring of 1999 the initial ideas evolved into creating a volume of articles surrounding seminal concepts pertaining to modeling and simulation as proposed developed and advocated by Professor Zeigler throughout his scientific career Also included would be articles describing progress covering related aspects of software engineering and artificial intelligence As this volume is emphasizing concepts and ideas spawned by the

work of Bernard P Zeigler it is most appropriate to offer a biographical sketch of his scientific life thus putting into a historical perspective the contributions presented in this volume as well as new research directions that may lie ahead Bernard P Zeigler was born March 5 1940 in Montreal Quebec Canada where he obtained his bachelor s degree in engineering physics in 1962 from McGill University Two years later having completed his MS degree in electrical engineering at the Massachusetts Institute of Technology he spent a year at the National Research Council in Ottawa Returning to academia he became a Ph D student in computer and communication sciences at the University of Michigan Ann Arbor

Software Architecture: System Design, Development and Maintenance Jan Bosch, Morven Gentleman, Christine Hofmeister, Juha Kuusela, 2013-06-29 For more and more systems software has moved from a peripheral to a central role replacing mechanical parts and hardware and giving the product a competitive edge Consequences of this trend are an increase in the size of software systems the variability in software artifacts and the importance of software in achieving the system level properties Software architecture provides the necessary abstractions for managing the resulting complexity We here introduce the Third Working IEEE/IFIP Conference on Software Architecture WICSA3 That it is already the third such conference is in itself a clear indication that software architecture continues to be an important topic in industrial software development and in software engineering research However becoming an established field does not mean that software architecture provides less opportunity for innovation and new directions On the contrary one can identify a number of interesting trends within software architecture research The first trend is that the role of the software architecture in all phases of software development is more explicitly recognized Whereas initially software architecture was primarily associated with the architecture design phase we now see that the software architecture is treated explicitly during development product derivation in software product lines at run time and during system evolution Software architecture as an artifact has been decoupled from a particular lifecycle phase
