Calibration of Watershed Models Qingyun Duan, Hoshin V. Gupta, Soroosh Sorooshian, Alain N. Rousseau, Richard Turcotte, 2003-01-10
Published by the American Geophysical Union as part of the Water Science and Application Series Volume 6
During the past four decades computer based mathematical models of watershed hydrology have been widely used for a variety of applications including hydrologic forecasting hydrologic design and water resources management These models are based on general mathematical descriptions of the watershed processes that transform natural forcing e g rainfall over the landscape into response e g runoff in the rivers The user of a watershed hydrology model must specify the model parameters before the model is able to properly simulate the watershed behavior
Principles of Snow Hydrology David R. DeWalle, Albert Rango, 2008-07-03
Principles of Snow Hydrology describes the factors that control the accumulation melting and runoff of water from seasonal snowpacks over the surface of the earth The book addresses not only the basic principles governing snow in the hydrologic cycle but also the latest applications of remote sensing and techniques for modeling streamflow from snowmelt across large mixed land use river basins Individual chapters are devoted to climatology and distribution of snow snowpack energy exchange snow chemistry ground based measurements and remote sensing of snowpack characteristics snowpack management and modeling snowmelt runoff Many chapters have review questions and problems with solutions available online This book is a reference book for practicing water resources managers and a text for advanced hydrology and water resources courses which span fields such as engineering earth sciences meteorology biogeochemistry forestry and range management and water resources planning
Handbook of Engineering Hydrology (Three-Volume Set) Saeid Eslamian, 2018-10-03
While most books examine only the classical aspects of hydrology this three volume set covers multiple aspects of hydrology and includes contributions from experts from more than 30 countries It examines new approaches addresses growing concerns about hydrological and ecological connectivity and considers the worldwide impact of climate
