O'Sullivan, 2003-09-02 First Published in 2004 Routledge is an imprint of Taylor Francis an informa company      *Passive Solar Energy in Buildings* Working Group on Passive Solar Building Design, 1988      Passive Solar Buildings J. Douglas Balcomb, 1992 Describes developments in passive solar technology that will save time energy and resources in planning for the buildings of the future This companion to Passive Cooling and Solar Building Architecture volumes 8 and 9 describes developments in passive solar technology that will save time energy and resources in planning for the buildings of the future It is filled with tips and useful research for architects and designers and includes three substantial chapters on general modeling Passive solar heating works Properly designed and constructed it is cost effective practical comfortable and aesthetic Balcomb s introductory remarks set the tone for the rest of the contributions which describe the considerable record of achievements in passive solar heating Balcomb summarizes and evaluates the era between 1976 and 1983 when most of the major developments took place and highlights the design features that have contributed to effective buildings Three chapters cover modeling passive systems applicable to both heating and cooling and six chapters focus on the application of passive solar heating with emphasis on components analytical results for specific systems test modules subsystem integration into buildings performance monitoring and results and design tools J Douglas Balcomb is a Principal Engineer with the Solar Energy Research Institute      *A Handbook on Low-Energy Buildings and District-Energy Systems* L.D. Danny Harvey, 2012-08-21 Winner of Choice Magazine Outstanding Academic Titles for 2007 Buildings account for over one third of global energy use and associated greenhouse gas emissions worldwide Reducing energy use by buildings is therefore an essential part of any strategy to reduce greenhouse gas emissions and thereby lessen the likelihood of potentially catastrophic climate change Bringing together a wealth of hard to obtain information on energy use and energy efficiency in buildings at a level which can be easily digested and applied Danny Harvey offers a comprehensive objective and critical sourcebook on low energy buildings Topics covered include thermal envelopes heating cooling heat pumps HVAC systems hot water lighting solar energy appliances and office equipment embodied energy buildings as systems and community integrated energy systems cogeneration district heating and district

cooling The book includes exemplary buildings and techniques from North America Europe and Asia and combines a broad holistic perspective with technical detail in an accessible and insightful manner Solar Energy Applications in Houses, Smart Cities and Microgrids Luis Hernández Callejo,2020-01-07 Five papers were selected for this Special Issue with three relating to solar energy applications in houses smart cities and microgrids one studying the relationship between the smart city model and the concept of energy sustainability and one addressing the following two topics the lack of effectiveness of detection algorithms based on the voltage frequency displacement concept under voltage controlled inverters and the applicability limits of others based on the impedance measurement IM **Energy Dynamics of Green Buildings**

*Solar Energy* Andy Walker,2013-09-23 Solar Energy is an authoritative reference on the design of solar energy systems in building projects with applications operating principles and simple tools for the construction engineering and design professional The book simplifies the solar design and engineering process providing sample documentation and special tools that provide all the information needed for the complete design of a solar energy system for buildings to enable mainstream MEP and design firms and not just solar energy specialists to meet the growing demand for solar energy systems in building projects *Sustainability through Energy-Efficient Buildings* Amritanshu Shukla,Atul Sharma,2018-03-20 The book covers chapters ranging from introduction to recent technological challenges case studies of energy efficient buildings with policy and awareness issues fundamentals and present status along with research updates and future aspects on topics focusing on energy efficient construction materials Provides comprehensive information on energy efficient buildings including policy and energy audit aspects with case studies Examines application of PCMs in passive heating and cooling in buildings role of active TES and energy saving potential Solution Sets for Net Zero Energy Buildings Françios

Garde,Joseph Ayoub,Laura Aelenei,Daniel Aelenei,Alessandra Scognamiglio,2017-03-01 Net Zero Energy Buildings have been the object of numerous studies in recent years as various countries have set this performance level as a long term goal of their energy policies This book presents a unique study of 30 NZEBs that have been constructed and have had their performance measured for at least 12 months The study is based upon an international collaborative research initiated by the International Energy Agency the Solar Heating and Cooling Programme SHC It is the first book to evaluate building

strategies in houses educational buildings and offices that have been demonstrated to work in practice It examines how the design challenges of climate and building type have been addressed and to what extent the various design approaches have been successful This book presents convincing evidence that a careful re thinking of conventional design norms can achieve a far greater performance benefit than is normally feasible It identifies solution sets that work at the whole building level and at the individual building design challenge level for each climate and building type In doing so the book provides guidance as to how to improve the design by learning from these cases Unusually for a book of this type it has examples of buildings in what are conventionally labeled hot and cold climates A simple process is proposed for the reader to commission the analysis of their own climate to assess not only the conventional measure of how hot or cold or humid it is but also to assess its suitability to support other NZEB technical challenge solutions sets such as Daylight or Natural Ventilation or comfort based climate conditioning

**Cost Optimal and Nearly Zero-Energy Buildings (nZEB)** Jarek Kurnitski,2013-11-20 Cost optimal and nearly zero energy performance levels are principles initiated by the European Union s EU Energy Performance of Buildings Directive which was recast in 2010 These will be major drivers in the construction sector in the next few years because all new buildings in the EU from 2021 onwards are expected to be nearly zero energy buildings nZEB This book introduces the technical definitions system boundaries energy calculation methodology and input data needed to set primary energy based minimum cost optimal and nZEB requirements in national energy frames Worked examples are provided to illustrate the calculation of delivered exported and primary energy and renewable energy contribution Five case studies of high performance nZEB office buildings across Europe are reported to show alternative technical solutions and to draw some general design rules based on completed nZEB buildings Specific features of the nZEB design process especially in the early stages and architectural competitions are included These describe important design issues in the scoping and conceptual design phase allowing design streams to be controlled so that specified targets can be met This book is intended for readers who need to be aware of or are working with the energy performance of buildings for decision makers in public and private sectors architects engineers construction clients consultants contractors manufacturers and students The editor of this book Professor Jarek Kurnitski has made major contributions to the preparation of the European REHVA nZEB technical definition and has developed energy calculation frames for current Estonian and Finnish energy performance regulations He is the leader of nZEB research at Tallinn University of Technology in Estonia and Aalto University in Finland and he has over 300 publications
