**Cosmic Winds and the Heliosphere** J. R. Jokipii, C. P. Sonett, Mark S. Giampapa, 2018-01-30 Until the advent of space physics astrophysical plasmas could be studied only using ground based observations Although observational methods have advanced over recent decades the merging of heliospheric physics with astrophysics is far from complete due to the vastly different techniques employed by astronomers and space physicists That astrophysical plasmas can be studied directly is a major advance in astrophysical research The solar wind from the Sun is only one of many examples of solar winds but it provides scientists with a basis for understanding how these formerly disparate disciplines are related Cosmic Winds and the Heliosphere is a comprehensive sourcebook on conceptually correlated topics in astrophysical winds and heliospheric physics The contributors review the various kinds of winds such as solar wind winds of cataclysmic variables and winds from pulsating stars They then examine the physics of wind origin and physical phenomena in winds including heliospheric shocks magnetohydrodynamic turbulence and kinetic phenomena A final section considers interactions with surrounding media with contributions ranging from studies of the interstellar cloud surrounding the solar system to considerations of solar wind interaction with comets Prepared to the scrupulous standards of the University of Arizona Space Science Series Cosmic Winds and the Heliosphere is an essential volume for astronomers and space physicists **Literature 1991, Part 2**

**Physics of Magnetospheric Substorms** Syun-Ichi Akasofu, 2012-12-06 Man through intensive observations of natural phenomena has learned about some of the basic principles which govern nature The aurora is one of the most fascinating of these natural phenomena and by studying it man has just begun to comprehend auroral phenomena in terms of basic cosmic electrodynamic processes The systematic and extensive observation of the aurora during and after the great international enterprise the International Geophysical Year IGY led to the concept of the auroral substorm Like many other geophysical phenomena auroral displays have a dual time universal and local time dependence when seen by a ground based observer Thus it was a difficult task for single observers rotating with the Earth once a day to grasp a transient feature of a large scale auroral display Such a complexity is inevitable in studying many geophysical features in particular the polar upper atmospheric phenomena However it was found that their complexity began to unfold when the concept of the auroral substorm was introduced In a book entitled Polar and Magnetospheric Substorms the predecessor to this book I tried to describe the auroral phenomena as completely as possible in terms of the concept of the auroral substorm At that time the first satellite observations of particles and magnetic fields during substorms were just becoming available and it was suggested that the auroral sub storm is a manifestation of a magnetospheric phenomenon called the magnetospheric substorm
