Blanc, 2013-03-09

Since the first edition of this book appeared in 1990 planetology has seen a number of fascinating discoveries that have increased our knowledge of the Solar System These have come from both ground and space based observational programmes Although some space probe missions have ended in failure even they have added to our store of information about the planetary environment The Galileo probe despite being crippled by its incompletely deployed main antenna has already achieved some spectacular results For the first time we have obtained pictures of asteroids with the images that Galileo returned of Gaspra Ida and the latter's satellite Dactyl The main objective the dropping of an instrumented capsule into Jupiter's atmosphere and prolonged in situ investigation of the planet will take place at the end of 1995 Saturn's turn will come early in the next century with the Cassini mission to be launched in 1997 which will study the planet for an extended period and attempt to land the Huygens probe on the surface of Titan NASA's Magellan mission proved to be a great success with its highly detailed radar mapping of the surface and atmospheric studies The exploration of Mars was less fortunate with the failure of both space probes of the Soviet Phobos mission as well as NASA's Mars Observer probe Despite this setback plans are in hand for future collaborative exploration of the planet using both surface stations possibly active rovers surface penetrators and balloon probes as well as orbiters A History of the Solar System Claudio

Vita-Finzi, 2016-07-14 This well illustrated book presents a compact history of the Solar System from its dusty origins 4 600 000 years ago to the present day Its primary aim is to show how the planets and their satellites comets meteors interplanetary dust solar radiation and cosmic rays continually interact sometimes violently and it reflects humanity's progress in exploring and interpreting this history The book is intended for a general readership at a time when human and robotic exploration of space is often in the news and should also appeal to students at all levels It covers the essentials but refers to a large literature which can be accessed via the internet **The Solar System** Therese Encrenaz, Jean-Pierre Bibring, M. Blanc, Maria-Antonietta Barucci, Francoise Roques, Philippe Zarka, 2004-01-26

Antonietta Barucci, 2008 A new frontier in our solar system opened with the discovery of the Kuiper Belt and the extensive population of icy bodies orbiting beyond Neptune Today the study of all of these bodies collectively referred to as trans Neptunian objects reveals them to be frozen time capsules from the earliest epochs of solar system formation This new volume in the Space Science Series with one hundred contributing authors offers the most detailed and up to date picture of our solar system's farthest frontier Our understanding of trans Neptunian objects is rapidly evolving and currently constitutes one of the most active research fields in planetary sciences The *Solar System Beyond Neptune* brings the reader to the forefront of our current understanding and points the way to further advancement in the field making it an indispensable resource for researchers and students in planetary science
