Hwang, 2012-12-06 One of the strongest trends in the design and manufacture of modern electronics packages and assemblies is the utilization of surface mount technology as a replacement for through hole technology The mounting of electronic devices and components onto the surface of a printed wiring board or other substrate offers many advantages over inserting the leads of devices or components into holes From the engineering viewpoint much higher lead counts with shorter wire and interconnection lengths can be accommodated

This is critical in high performance modern electronics packaging From the manufacturing viewpoint the application of automated assembly and robotics is much more adaptable to high lead count surface mounted devices and components Indeed the insertion of high lead count parts into fine holes on a substrate might often be nearly impossible Yet in spite of these surface mounting advantages the utilization of surface mount technology is often a problem primarily due to soldering problems The most practical soldering methods use solder pastes whose intricacies are frequently not understood by most of those involved in the engineering and manufacture of electronics assemblies This publication is the first book devoted exclusively to explanations of the broad combination of the chemical metallurgical and rheological principles that are critical to the successful use of solder pastes The critical relationships between these characteristics are clearly explained and presented In this excellent presentation Dr Hwang highlights three important areas of solder paste technology *Lead-Free Soldering in Electronics* Katsuaki Suganuma, 2003-12-11 Assessing the scientific and technological aspects of lead free soldering Lead Free Soldering in Electronics considers the necessary background and requirements for proper alloy selection It highlights the metallurgical and mechanical properties plating and processing technologies and evaluation methods vital to the production of lead free solders in electronics A valuable resource for those interested in promoting environmentally conscious electronic packaging practices Responding to increasing environmental and health concerns over lead toxicity Lead Free Soldering in Electronics discusses Soldering inspection and design Mechanical evaluation in electronics Lead free solder paste and reflow soldering Wave soldering Plating lead free soldering in electronics Lead Free Soldering in Electronics will benefit manufacturing electronics and mechanical engineers as well as undergraduate and graduate students in these disciplines Soldering in Electronics Assembly MIKE JUDD, Keith Brindley, 1999-04-14 Managers engineers and technicians will use this book during industrial construction of electronics assemblies whilst students can use the book to get a grasp of the variety of methods available together with a discussion of technical concerns It includes over 200 illustrations including a photographic guide to defects and contains many line drawings tables and flow charts to illustrate the subject of electronics assembly Soldering in Electronics Assembly looks theoretically at everything needed in a detailed study but in a practical manner It examines the soldering processes in the light of electronic assembly type solder flux and cleaning requirements It has information on every available process from the most basic hand soldering through to latest innovative ones such as inert atmosphere wave soldering and zoned forced convection infra red machines The book provides a detailed analysis of solder and soldering action purpose of flux and relevant flux types for any application classification of assembly variants assessment and maintenance of solderability There is also a detailed analysis of soldering process defects and causes In addition Soldering in Electronics Assembly contains a new chapter on Ball Grid Array BGA technology A practical guide for the industry covering all the main soldering processes currently in use Cleaning faults troubleshooting and standards are all major topics Considers safety and solder process quality assessment *Modern Solder Technology for*

Manufacturing Challenges in Electronic Packaging Y.C. Lee, W.T. Chen, 2012-12-06 About five to six years ago the words packaging and manufacturing started to be used together to emphasize that we have to make not only a few but thousands or even millions of packages which meet functional requirements The aim of this book is to provide the much needed reviews and in depth discussions on the advanced topics surrounding packaging and manufacturing The first chapter gives a comprehensive review of manufacturing challenges in electronic packaging based on trends predicted by different resources Almost all the functional specifications have already been met by technologies demonstrated in laboratories However it would take tremendous efforts to implement these technologies for mass production or flexible manufacturing The topics crucial to this implementation are discussed in the following chapters Chapter 2 Challenges in solder assembly technologies Chapter 3 Testing and characterization Chapter 4 Design for manufacture and assembly of electronic packages Chapter 5 Process modeling optimization and control in electronics manufacturing and Chapter 6 Integrated manufacturing system for printed circuit board assembly The electronics based products are very competitive and becoming more and more application specific Their packages should fulfill cost speed power weight size reliability and time to market requirements More importantly the packages should be manufacturable in mass or flexible production lines These chapters are excellent references for professionals who need to meet the challenge through design and manufacturing improvements This book will also introduce students to the critical issues for competitive design and manufacturing in electronic packaging
