The ***melting point*** of a solid or the ***freezing point*** of a liquid is the temperature at which the solid and liquid phases coexist in equilibrium.

***Molar heat of fusion*** ( $\Delta H_{\text{fus}}$ ) is the energy required to melt 1 mole of a solid substance at its freezing point.

$$\Delta H_{\text{fus}} = -\Delta H_{\text{solid}}$$

Solid-Liquid Equilibrium in Multi Solute Systems Izumi Kurosawa, 2004 Solid liquid equilibrium in isomorphous amino acid systems has been investigated as a model for systems that form solid solutions Solid and liquid phase compositions in L valine L leucine L valine L isoleucine and L isoleucine L valine in water were measured over the entire range of solid composition and it was shown from mass balance and phase rule considerations that these systems form solid solutions The solid phases resulting from isothermal and cooling crystallization experiments were also investigated using powder x ray diffractometry which showed that homogeneous solid solutions could only be obtained in cooling crystallization experiments whereas isothermal experiments generally produced inhomogeneous solids This suggests that data reported in the literature from isothermal experiments may not represent true equilibrium values Solid phase activity coefficients were estimated using binary and ternary equilibrium data and the UNIFAC Kuramochi model for liquid phase nonidealities The solid phases in the three systems investigated exhibited significant nonidealities that were correlated using the Margules model The model parameters exhibited a linear relationship with the ratio of binary solubilities of the two solutes Such simple relationship may be advantageous when solid liquid equilibrium of thermally unstable solutes or components with unknown physical properties are crystallized      *Studies in Natural Solid-liquid Equilibrium* Mark Stefan Ghiorso, 1982      *Scientific Unit Conversion* Francois Cardarelli, 2012-12-06 Ph D in Chemical Engineering Postgraduate Degree in Electrochemistry M Sc in Physical Chemistry B Sc in Physical Chemistry and Nuclear Engineering in Geophysics and Geology Associate Degree Author Working Areas The successive author working areas since 1990 up to 1997 are in order I Research scientist at the Laboratory of Electrochemistry University Pierre 2 Research scientist at the Institute of Marine Biogeochemistry CNRS 3 Research scientist for the production of tantalum protective coatings for the chemical process industries by electro chemistry in molten salts 4 Research scientist for the preparation and characterization of IrOrbased Dimensionally Stable Anodes DSA for oxy gen evolution in acidic media used in industrial electrochemical processes Laboratory of Electrochemical Engineering Toulouse 5 Consultant in Electrochemical Engineering Toulouse 6 Battery Product Leader Argo Tech Productions Inc Boucheville Quebec Canada Contents List of Tables xiii 1 Introduction 1 1 1 Why a Conversion Handbook 1 1 2 How to Use This Book 2 2 The International System of Units 3 2 1 History 3 2 2 The General Conference on Weights and Measures 6 2 3 Organization of the SI 6 2 3 1 SI Base Units 7 2 3 2 SI Supplementary Units 9 2 3 3 SI Derived Units      **Encyclopaedia of Scientific Units, Weights and Measures** François Cardarelli, 2012-12-06 Mankind has a fascination with measurement Down the centuries we have produced a plethora of incompatible and duplicatory systems for measuring everything from the
