Crystal Optics with Spatial Dispersion, and Excitons Vladimir M. Agranovich, V. Ginzburg, 2013-06-29 Spatial dispersion namely the dependence of the dielectric constant tensor on the wave vector \mathbf{k} or on the wavelength at a fixed frequency is receiving increased attention in electrodynamics and condensed matter optics particularly in crystal optics In contrast to frequency dispersion namely the frequency dependence of the dielectric constant spatial dispersion is of interest in optics mainly when it leads to qualitatively new phenomena One such phenomenon has been well known for many years it is the natural optical activity gyrotropy But there are other interesting effects due to spatial dispersion namely new normal waves near absorption lines optical anisotropy of cubic crystals and many others Crystal optics that takes spatial dispersion into account includes classical crystal optics with frequency dispersion only as a special case In our opinion this fact alone justifies efforts to develop crystal optics with spatial dispersion taken into account although admittedly its influence is small in some cases and it is observable only under rather special conditions Furthermore spatial dispersion in crystal optics deserves attention from another point as well namely the investigation of excitons that can be excited by light We contend that crystal optics with spatial dispersion and the theory of excitons are fields that overlap to a great extent and that it is sometimes quite impossible to separate them It is our aim to show the true interplay between these interrelations and to combine the macroscopic and microscopic approaches to crystal optics with spatial dispersion and exciton theory *Energy Research Abstracts*, 1993 Semiannual with semiannual and annual indexes References to all scientific and technical literature coming from DOE its laboratories energy centers and contractors Includes all works deriving from DOE other related government sponsored information and foreign nonnuclear information Arranged under 39 categories e.g. Biomedical sciences basic studies Biomedical sciences applied studies Health and safety and Fusion energy Entry gives bibliographical information and abstract Corporate author subject report number indexes **Carbon Nanotubes** Mildred S. Dresselhaus, Gene Dresselhaus, Phaedon Avouris, 2003-07-01 After a short introduction and a brief review of the relation between carbon nanotubes graphite and other forms of carbon the synthesis techniques and growth mechanisms for carbon nanotubes are described This is followed by reviews on nanotube electronic structure electrical optical and mechanical properties nanotube imaging and spectroscopy and nanotube applications *Progress in Inorganic Chemistry, Volume 8* F. Albert Cotton, 2009-09-17 This comprehensive series of volumes on inorganic chemistry provides inorganic chemists with a forum for critical authoritative evaluations of advances in every area of the discipline Every volume reports recent progress with a significant up to date selection of papers by internationally recognized researchers complemented by detailed discussions and complete documentation Each volume features a complete subject index and the series includes a cumulative index as well *Computer Simulation Using Particles* R.W Hockney, J.W Eastwood, 2021-03-24 Computer simulation of systems has become an important tool in scientific research and engineering design including the simulation of systems

through the motion of their constituent particles Important examples of this are the motion of stars in galaxies ions in hot gas plasmas electrons in semiconductor devices and atoms in solids and liquids The behavior of the system is studied by programming into the computer a model of the system and then performing experiments with this model New scientific insight is obtained by observing such computer experiments often for controlled conditions that are not accessible in the laboratory Computer Simulation using Particles deals with the simulation of systems by following the motion of their constituent particles This book provides an introduction to simulation using particles based on the NGP CIC and P3M algorithms and the programming principles that assist with the preparations of large simulation programs based on the OLYMPUS methodology It also includes case study examples in the fields of astrophysics plasmas semiconductors and ionic solids as well as more detailed mathematical treatment of the models such as their errors dispersion and optimization This resource will help you understand how engineering design can be assisted by the ability to predict performance using the computer model before embarking on costly and time consuming manufacture
