Solitons in Nuclear and Elementary Particle Physics Alan Chodos, E. Hadjimichael, Chia-Hsiung Tze, 1984 *N* Physics - Proceedings Of The Fourth Cebaff/int Workshop* Harry Tsung-shung Lee, Winston Roberts, 1997-06-27 It has been well recognized that the study of the excitations of the nucleon can shed light on the nonperturbative aspects of QCD New opportunities for such study will be opened in the next few years with the commissioning of experiments in Hall B of the Continuous Electron Beam Accelerator Facility CEBAF at the Thomas Jefferson National Accelerator Facility JLab Photo and electroproduction studies of single and double pions rhos omegas and kaons will be conducted with unprecedented precision The Hall B CLAS detector is a major step forward promising to provide kinematically complete measurements of cross sections and spin observables The task of extracting new insights from such detailed measurements will require close coordination between experimental and theoretical physicists To help optimize this interface between theory and experiment a joint CEBAF INT workshop was held at the Institute of Nuclear Theory in Seattle September 9 13 1996 The foci of the 1996 workshop included N N transition form factors as predicted by QCD inspired models and their experimental consequences theoretical techniques employing QCD sum rules perturbative QCD and lattice QCD reaction theories of photo and electro production of mesons theoretical issues in the eta meson vector meson and two pion production channels progress in developing amplitude analyses for the available and expected data the relationship between the Hall B program and those of other new experimental facilities This proceeding will serve readers as both a current perspective on the field and a guide to future experimental and theoretical research directions Baryons As Skyrme Solitons - Proceedings Of The International Workshop G Holzwarth, 1993-07-15 The revival of the Skyrme model for baryons has led to a large variety of investigations ranging from the foundations of effective meson theories and chiral soliton models over numerous extensions of Skyrme s original concept to many impressive results in applications to the meson baryon system Each author has made essential contributions to the field of his expertise and the lectures collected in this proceedings review and asses the present status of these achievements and serve as guiding lines for future developments **Chiral Solitons** Keh-fei Liu, Chia-hsiung Tze, Lai-him Chan, Gregory S Adkins, Michael P Mattis, R Vinh Mau, Manoj K Banerjee, Wojciech Broniowski, Thomas D Cohen, L S Celenza, C M Shakin, Lawrence Willets, Chun Wa Wong, Henri Verschelde, John P Ralston, M Bolsterli, J A Parmentola, Ismail Zahed, 1987-04-01 This review volume on topological and nontopological chiral solitons presents a global view on the current developments of this field in particle and nuclear physics The book addresses problems in quantization restoration of translational and rotational symmetry and the field theoretical approach to solitons which are common problems in the field of solitons Primarily aimed for graduate students and the novice in the field the collected articles cover a broad spectrum of topics in formalism as well as phenomenology **Workshop on Nuclear Chromodynamics--Quarks and Gluons in Particles and Nuclei** S.
