expectations of society are very high the advancement of medicine will depend on computer and device technology in coming decades as they did in the last decades We received 321 manuscripts of which 41 were chosen for oral presentation and 143 for poster presentation Each paper has been included in these proceedings in eight page full paper format without any differentiation between oral and poster papers Adherence to this full paper format along with the increased number of manuscripts surpassing all our expectations has led us to issue two proceedings volumes for the first time in MICCAI s history Keeping to a single volume by assigning fewer pages to each paper was certainly an option for us considering our budget constraints However we decided to increase the volume to offer authors maximum opportunity to argue the state of art in their work and to initiate constructive discussions among the MICCAI audience

Oncological surgeons are often requested in their clinical practice to identify and manage uncommon and complex situations. It is therefore of the utmost importance that they are well aware of the most recent technological evolutions in order to achieve the best possible results in terms of oncological outcome with a concern on quality of life and economical issues. Furthermore, new techniques can give a fundamental contribution in overcoming the limitations of standard approaches. An essential aim of this book is to underline the great importance and the need of an effective coordination of multidisciplinary care among surgeons, medical oncologists, radiation therapists, plastic surgeons and ancillary services in order to optimise patient outcome. **Learning Dynamic Spatial Relations** Andreas Bihlmaier, 2016-08-12 Andreas Bihlmaier describes a

novel method to model dynamic spatial relations by machine learning techniques. The method is applied to the task of representing the tacit knowledge of a trained camera assistant in minimally invasive surgery. The model is then used for intraoperative control of a robot that autonomously positions the endoscope. Furthermore, a modular robotics platform is described which forms the basis for this knowledge based assistance system. Promising results from a complex phantom study are presented. **Simulation Training in Laparoscopy and Robotic Surgery** Hitendra R.H. Patel, Jean V.

Joseph, 2012-04-23 The field of minimally invasive surgery MIS has now taken centre stage in modern clinical practice With ever changing technologies in the field of MIS such as robotics there is now the need to train the surgeon to the next degree Training by simulation whether virtual hybrid or real allows the surgeon to rehearse learn improve or maintain their skills in a safe and stress free environment Simulation Training in Laparoscopy and Robotic Surgery gives a true insight into the latest educational and learning techniques for new technologies in surgery Written by an international team of experts this illustrated text provides advice on specialised team training non technical skills and simulation Simulation Training in Laparoscopy and Robotic Surgery is an important training aide for surgeons and residents interested in developing skills in this field *Laparoscopic Hernia Surgery* Karl Leblanc, 2003-08-29 Repair of simple and complex abdominal hernias by the laparoscopic technique is now the method of choice in many centres Laparoscopic repair offers equivalent outcomes to open repair with the additional benefits of greater patient satisfaction and reduced hospitalization For some hernias notably incisional and hiatal the outcome appears to be superior using the minimally invasive technique This book authored by an international team of leading surgeons in the field of hernia repair gives a definitive guide to appropriate patient selection and operative technique The introductory section delivers a useful illustrated account of instrumentation biomaterials and mesh fixation Subsequent sections provide detailed information about inguinal incisional and hiatal herniorrhaphy including four chapters devoted to the use of laparoscopy in the pediatric patient Robotics and the socio economic aspects of hernia surgery are also discussed The book gives in depth coverage of each surgical procedure including essential background information relevant anatomy preoperative evaluation of the patient choice of instrumentation and biomaterials and cosmetic results Each procedure is illustrated with a step by step series of high quality laparoscopic photographs allowing the reader to follow the sequence of the operation The recognition and management of complications is highlighted and successful postoperative management techniques are also considered Instructional descriptive and illustrated in colour throughout this unrivalled operative guide offers a complete analysis of each of the current technologies and is an invaluable source of information for practicing and trainee surgeons Haptics for Teleoperated Surgical Robotic Systems M. Tavakoli, 2008 An important obstacle in Minimally Invasive Surgery MIS is the significant degradation of haptic feedback sensation of touch to the surgeon about surgical instrument s interaction with tissue This monograph is concerned with devices and methods required for incorporating haptic feedback in master slave robotic MIS systems In terms of devices novel mechanisms are designed including a surgical end effector slave with full force sensing capabilities and a surgeon robot interface master with full force feedback capabilities Using the master slave system various haptic teleoperation control schemes are compared in terms of stability and performance and passivity based time delay compensation for haptic teleoperation over a long distance is investigated The monograph also compares haptic feedback with visual feedback and with substitution for haptic feedback by other sensory cues in terms of surgical task performance Sample Chapter s Introduction 1 826 KB Contents Introduction
