Solubility In Inorganic Two Component Systems Physical Sciences Data 6:

Halogenated Hydrocarbons A.L. Horvath, 2020-11-25 This book promotes a basic understanding of the concept of solubility and miscibility between halogenated hydrocarbons and water It points out the regularities existing between solubility and physical properties of solute and solvent The book is valuable to chemists and chemical engineers 14th International Symposium on Industrial Crystallization , 1999 This conference provides a forum for discussion of the advances in the theory and practice of crystallization as it relates to the production of bulk crystalline materials Handbook of Fourier Transform Raman and Infrared Spectra of Polymers A.H. Kuptsov, G.N. Zhizhin, 1998-10-29 A collection of infrared and Raman spectra of 500 natural and synthetic polymers of industrial importance is presented in this book A large variety of compounds are included starting with linear polyolefins and finishing with complex biopolymers and related compounds The spectra were registered using Infrared Fourier Transform Spectrometers in the laboratory of the All Russia Institute of Forensic Sciences The IR and Raman spectra are presented together on the same sheet The accompanying data include general and structure formulae CAS register numbers and sample preparation conditions Features of this book Continues the long tradition of publishing specific and standard data of new chemical compounds For low molecular weight substances complementary IR and Raman spectra are featured on the same sample and printed on the same page This fingerprint data allows the substance of the sample to be identified without doubt An important feature of this unique collection of data is the increase in the identification precision of unknown substances Peak tables are available in digital ASCII format on a diskette delivered with the book This allows the user to search for unknowns All the spectra in the collection are base line corrected This book will be of interest to scientists involved in the synthesis of new polymeric materials polymer identification and quality control Libraries of scientific institutes research centers and universities involved in vibrational spectroscopy will also find this collection invaluable Solubility of Gases and Solids Jaime Wisniak, Mordechai Herskowitz, 1984 **Gaussian Basis Sets for Molecular Calculations** S. Huzinaga, J. Andzelm, E. Radzio-Andzelm, Y. Sakai, H. Tatewaki, M. Klobukowski, 2012-12-02 Physical Sciences Data Volume 16 Gaussian Basis Sets for Molecular Calculations provides information pertinent to the Gaussian basis sets with emphasis on lithium radon and important ions This book discusses the polarization functions prepared for lithium through radon for further improvement of the basis sets Organized into three chapters this volume begins with an overview of the basis set for the most stable negative and positive ions This text then explores the total atomic energies given by the basis sets Other chapters consider the distinction between diffuse functions and polarization function This book presents as well the exponents of polarization function The final chapter deals with the Gaussian basis sets This book is a valuable resource for chemists scientists and research workers **Silica Glass and Binary Silicate Glasses** , 2012-12-02 Physical Sciences Data Volume 15 Handbook of Glass Data Silica Glass and Binary Silicate Glasses Part A presents information on the systems capable of forming glasses by cooling melts This book provides

data on the crystallization rates of glasses Organized into six chapters this volume begins with an overview of the melt properties for the glass forming systems This text then examines the notion of a component that is very significant for determining the number of components in each investigated glass Other chapters consider the contents of several oxides of the same element but in different valent state as the reason to transfer a glass to the category of the increased number of components This book discusses as well the analytical composition of glass The final chapter deals with flotation method using tetrabromoethane and benzene mixture This book is a valuable resource for glass specialists chemists engineers scientists and information science workers

Self-diffusion in Electrolyte Solutions R. Mills,V.M.M. Lobo,2013-10-22 This compilation the first of its kind fills a real gap in the field of electrolyte data Virtually all self diffusion data in electrolyte solutions as reported in the literature have been examined and the book contains over 400 tables covering diffusion in binary and ternary aqueous solutions in mixed solvents and of non electrolytes in various solvents An important feature of the compilation is that all data have been critically examined and their accuracy assessed Other features are an introductory chapter in which the methods of measurement are reviewed appendices containing tables of the limiting self diffusion coefficients of ions and a list of references to data which have been omitted but where information about the diffusing system is given This is the only complete compilation of self diffusion data in electrolyte solutions It will appeal to electrochemists in general particularly now that recent developments in the theory of transport processes require these data It will also have a special appeal to electroanalytical chemists in that the ionic self diffusion coefficient is an important quantity for the interpretation of electrode reactions In addition the book will interest geochemists and environmental chemists because the migration of radioactive ions from nuclear waste in certain aqueous media will be governed by the tracer diffusion coefficient

Electronic Absorption Spectra of Radical Ions Tadamasa Shida,1988

The rapid growth in research activities related directly and indirectly to chemical intermediates has increased the demand for dependable spectral information on radical ions Such information is needed for identifying newly produced intermediates under various experimental conditions such as laser photolysis pulse radiolysis irradiation with synchrotron radiation electron bombardment electrolysis chemical reactions involving electron transfer and so on This large format handbook comprises the first comprehensive compilation of electronic absorption spectra of radical cations and anions Most radical ions are difficult to produce by conventional methods and their highly reactive character makes their detection and measurement of their spectra difficult However the author of this book has employed a unique technique a combination of matrix isolation and radiolytic methods which has enabled him to record more than seven hundred spectra most of which have not been reported before In addition approximate extinction coefficients are provided for many radical ions

reduce the time which needs to be spent on patient searching and to recommend the best starting point and sources most

likely to yield the desired information The criteria for selection provide a way into a subject to those new to the field and

assists in identifying major new or possibly unexplored sources to those who already have some acquaintance with it The

series attempts to achieve evaluation through a careful selection of sources and through the comments provided on those
