

Is There Sound in Space?

No. Sound is a vibration that travels through matter.

Space is a vacuum, so it's silent.

Spaceship occupants hear the impact because of air inside ship.

External observer does not hear the impact because there is no air in space.

Hears the impact because vibration travels through tether.

Sound Space:

Sound, Space and Sociality in Modern Japan Joseph D. Hankins, Carolyn Stevens, 2013-12-04 This book argues that sound as it is created transmitted and perceived plays a key role in the constitution of space and community in contemporary Japan The book examines how sonic practices reflect politics aesthetics and ethics with transformative effects on human relations From right wing sound trucks to left wing protests from early 20th century jazz cafes to contemporary avant garde art forms from the sounds of U S military presence to exuberant performances organized in opposition the book rich in ethnographic detail contributes to sensory anthropology and the anthropology of contemporary Japan **Sound, Space and Society**

Kimberley Peters, 2017-11-30 In 1964 rebel radio stations took to the seas in converted ships to offer listening choice to a young resistant audience against a backdrop of restrictive broadcasting policies This book draws on this exceptional moment in social history and the decades that followed teasing out the relations between sound society and space that were central to pirate broadcasting activities With a turn towards mediated life in geography studies of radio have been largely absent However radio remains the most pervasive mass communications medium This book breaks new ground discussing in depth the relationship between radio space and society considering how space matters in the production consumption and regulation of audio transmission through the geophysical spaces of sea land and air It is relevant for readers interested in geographies of media sensory spatial experience everyday geopolitics and the turn towards elemental and more than human geographies **Worship Sound Spaces** Christine Guillebaud, Catherine Lavandier, 2019-11-18

Worship Sound Spaces unites specialists from architecture acoustic engineering and the social sciences to encourage closer analysis of the sound environments within places of worship Gathering a wide range of case studies set in Europe Asia North America the Middle East and Africa the book presents investigations into Muslim Christian and Hindu spaces These diverse cultural contexts demonstrate the composite nature of designing and experiencing places of worship Beginning with a historical overview of the three primary indicators in acoustic design of religious buildings reverberation intelligibility and clarity the second part of this edited collection offers a series of field studies devoted to perception before moving onto recent examples of restoration of the sound ambiances of former religious buildings Written for academics and students interested in architecture cultural heritage acoustics sensory studies and sound The multimedia documents of this volume may be consulted at the address <https://frama.link/WSS>

The Routledge Companion to the Sound of Space Emma-Kate Matthews, Jane Burry, Mark Burry, 2024-11-11 This companion explores a range of conceptual and practical relationships between sound and space across various disciplines providing insights from technical creative cultural political philosophical psychological and physiological perspectives The content spans a wide range of spatial typologies from large reverberant buildings to modest and intimate ones from external public squares to domestic interiors and from naturally formed environments to highly engineered spaces These compiled insights and observations explore the vast diversity of ways in
