**Spontaneous Intracerebral Haematomas** H.W. Pia,C. Langmaid,J. Zierski,2012-12-06 Spontaneous intracerebral haemorrhages are the most dangerous complication of cerebral vascular disease Because of their frequency and the fact that they lead to serious injuries prolonged disabilities and often death they have acquired an enormous significance both medically and socially Their precise diagnosis location wide extent and accompanying manifestations were for a very long time uncertain and in small and deeply situated haematomas these factors were impossible to determine Diagnosis was confirmed by the clinical picture by angiography and sometimes by ventriculography and included in the main both lobar and more extensive haematomas The results of operative treatment following the first attempt of H Cushing in 1903 were poor and remained unsatisfactory in spite of the endeavours of numerous authors Guillaume et al 1956 Lazorthes 1956 McKissock et al 1959 Luessenhop 1967 and many others Especially for the most frequent and typically hypertensive haematomas in the region of the internal capsule the opinion was often expressed that operative treatment was useless

**Intracerebral Hemorrhage** Carlos S. Kase,2015-01-28 This comprehensive guide analyzes the various aspects of intracerebral hemorrhage including mechanisms and clinical presentation with an emphasis on clinicroadiologic correlations Provided is a detailed analysis of the different clinical syndromes resulting from intracerebral hemorrhage in various locations and among different age groups

**Intracerebral Hemorrhage Hydrocephalus malresorptivus Peripheral Nerves** Rüdiger Lorenz,Margareta Klinger,Mario Brock,2012-12-06 Advances in Neurosurgery presents the experience and research results of modern neurosurgeons confronted with urgent diagnostic and therapeutic problems The first topic here is spontaneous intracerebral hematomas whose localization determines the form of treatment and usually its outcome Newer therapeutic approaches such as stereotactic removal endoscopy and fibrinolysis supplement the results of standard operative methods Secondly the hydrocephalus malresorptivus is covered presenting experience with the diagnostic value of intrathecal infusion tests CT cisternography evoked potentials and MRI CSF flow studies as well as aspects of neurosurgical intensive care such as barbiturate treatment respiratory problems in head injury patients auto regulation mechanisms and hospital infection The last section is devoted to peripheral nerve surgery reports on experience with microsurgery and various forms of anastomosis in both traumatic and tumorous nerve lesions

Driesen, Mario Brock, M. Klinger, 2012-12-06 W DRIESEN This volume contains the original text of 60 papers delivered at the 32nd Annual Meeting of the German Society for Neurosurgery held in Tübingen 22nd to 25th April 1981 They represent a selection from 91 papers submitted a third of which had to be excluded on critical analysis This was deemed necessary on account of costs and in order to keep the volume of a size and standard usually achieved within the last few years Three main subjects were considered 1 changes in methods of investigation and treatment of neurosurgical conditions brought about by the use of computerised axial tomography C A T scanning 2 papers dealing with fundamental research concerned with normal and abnormal cerebral metabolism 3 trauma to the vertebral column and spinal cord and its sequelae and 4 free communications The organisers of this meeting tried in contradistinction to previous custom to shift the emphasis away from highlighting major communications and so to remain true to their intention to allow experts in their fields to introduce their subjects and pin point problems to which subsequent speakers could then address them selves in detail in their own papers In my view this did occur in a meaningful way although not to perfection a goal always difficult to attain **Current**

Jensen, Mario Brock, M. Klinger, 2013-04-17 This volume of ADVANCES IN NEUROSURGERY presents the original texts of 60 papers delivered at the 33rd annual meeting of the German Neurosurgical Society held in Kiel from May 16th to 20th 1982 These papers represent a selection from some 162 papers submitted and 96 actually given The selection was made by the society's programme committee of which Professor W J BOCK Professor H DIETZ and Professor W GROTE are also members I would like to take this opportunity to express my sincere thanks to them for their untiring cooperation The scientific programme dealt with three main themes 1 Acute non traumatic intracranial hemorrhages a subject that has always been of importance for neurological surgeons since the anatomist Giovanni Battista MORGAGNI in 1791 first described in detail the clinical picture and the pathological and anatomical causes of a brain hemorrhage he had observed in his servant Indeed at our 31st annual meeting in Erlangen in 1980 Timing Problems in Subarachnoid Hemorrhages was one of the main topics of discussion For this year's meeting a cooperative study in which 27 university and hospital departments of neurosurgery participated enabled us to look into the causes and the diagnostic and therapeutic measures involved in a great number of cases of intracranial hemorrhage **Neurological Disorders** Thomas Brandt, 2003-01-03 This single volume reference covers the natural course treatment and management of all neurological diseases affecting the brain spinal cord nerves and muscles This comprehensive text reference seeks to assist physicians with treatment by providing an easy to use compendium covering the treatment and management of all neurological diseases along with details on the natural course of these diseases Organized for ease of use and quick reference each chapter presents a neurological disorder or key symptoms and systematically discusses the clinical syndrome and differential diagnosis natural course principles of therapy and practical

management of each Covers wide range of neurological conditions and potential treatments including the evidence for and against each treatment Describes the spontaneous course of neurological diseases along with discussion of the management of different stages and variants of a disorder Presents special situations and exceptional cases in which alternative therapies should be considered *Critical Care of the Stroke Patient* Stefan Schwab, Daniel Hanley, A. David Mendelow, 2014-06-05 New and groundbreaking therapeutic options for the critical care of patients with cerebrovascular disease have improved patient management minimized morbidity reduced in patient care improved quality of life and had a positive economic impact on health service provision This volume integrates these approaches and suggests the best therapy option for all cerebrovascular conditions The early chapters of the book focus on monitoring techniques and interventions Subsequent sections address the critical care of a wide range of cerebrovascular diseases ischemic stroke intracranial hemorrhage subarachnoid hemorrhage arteriovenous malformations cerebral venous thrombosis and traumatic injury The editors and authors are internationally recognized experts in their field and the text is supplemented by tables and illustrations to demonstrate important clinical findings This book will meet the needs of stroke physicians neurologists neurosurgeons neurointensivists and interventional neuroradiologists seeking to maximize positive outcomes for their patients *Surgery in and around the Brain Stem and the Third Ventricle* M. Samii, 2012-12-06 It is of course a real challenge to summon together an International Symposium in and around the Brain Stem and Third Ventricle Up to this moment the various experiences and papers on this subject were distributed throughout the world literature making it very difficult for someone interested in the matter to have access to the actual state of knowledge Therefore I believe such a meeting was long overdue and is a considerable attempt to open closed doors for present and future ambitious neurosurgical activities After succeeding in previous symposiums of similar interest in Hannover it was obvious that Prof Madjid Samii and his coworkers took the initiative of organizing such a meeting bringing together in the pure sense of the word Neurosurgeons with Anatomists Neurologists Neurophysiologists Neuroradiologists ENT Maxillofacial Stereotactic and Radiosurgeons as well as other colleagues One contribution after the other followed from the basic sciences up to the operative management considering very new and actual concepts Through the application of new microsurgical techniques and the incorporation of new understanding for the many problems afflicting the midline of the eNS and based on a growing closer cooperation between the various disciplines a wide field has opened up which concerns us all **Computed Tomography and Magnetic Resonance Tomography of Intracranial Tumors** C. Claussen, R. Fahlbusch, R. Felix, T. Grumme, J. Heinzerling, J. R. Iglesias-Rozas, E. Kazner, K. Kretschmar, M. Laniado, W. Lanksch, W. Müller-Forell, T. H. Newton, W. Schörner, G. Schroth, B. Schulz, O. Stochdorph, G. Sze, S. Wende, 2012-12-06 This book represents the second fully revised edition of the original volume published in 1982 Experience in neuroradiology has confirmed the outstanding value of computed tomography CT for the diagnosis of space occupying lesions within the skull and orbit It might be assumed then that the second edition of this

book would simply represent a numerically expanded continuation of the popular first edition. That is not the case, however. Advances in imaging techniques have prompted the creation of a new book whose expanded title reflects its more comprehensive nature. The added illustrations, the revised text, and the expanded circle of editors and contributors document this. Since publication of the first edition, a new modality, magnetic resonance imaging (MRI), has become an established neuroradiologic study. We felt it was essential to include this new modality in our book and explore its capabilities as an adjunct or alternative to CT scanning. Because of the high acquisition costs of MRI and the still small number of MR units currently in operation, we have relied in part on images furnished by other institutions and private practitioners to whom we are indebted. Many problems relating to MR, both in terms of equipment and image interpretation, have yet to be resolved. There is no denying that we still have much to learn.

Neurosurgical Standards, Cerebral Aneurysms, Malignant Gliomas  
Kurt Pisco, Margareta Klinger, Mario Brock, 2012-12-06

Three topics of major interest for neurosurgeons are covered in this volume of the Advances in Neurosurgery series, as the title suggests. First, neurosurgical standards of diagnosis and treatment are viewed from several points of view, including the legal one. Second, the many aspects of aneurysm surgery are dealt with, including timing and grading, monitoring during the operation, postoperative vasospasm, Doppler sonography, and new research in subarachnoid hemorrhage. Third, the diagnosis and treatment of malignant gliomas are discussed; there are preliminary reports on interstitial laser-assisted thermal therapy, immunotherapy, and radiopharmaceutical substances, as well as the standard forms of neurosurgical and radiation treatment.

Intracerebral Hematomas  
Howard H. Kaufman, 1992

A reference text on the pathophysiology, clinical features, natural history, diagnosis, and treatment of intracerebral haematomas. Coverage includes descriptions of newly developed treatment techniques involving both open surgery and aspiration with fibrinolytic agents and mechanical devices.

Recent Advances in Diagnosis and Treatment of Brain Tumors: From Pediatrics to Adults  
John Bianco, Dimitrios N. Kanakis, Cesare Zoia, Archya Dasgupta, Majaz Moonis, 2025-06-12

In the last few years, an impressive development has been achieved in the arena of new diagnostic and therapeutic approaches for brain tumors, both in children and adults. This has in turn led to the recognition of new tumour entities, as well as to better categorization of the existing ones. The recent WHO classification of the CNS tumors, 2021, has been entirely revised, and the term integrated diagnosis has been since then applied, which refers to a combination of the classical histopathological diagnosis with the accompanying molecular results of some of the most common tumors. In addition, a lot of progress has been made in the field of imaging, with the invention of more accurate methods and the improvement of previously established diagnostic modalities. As a result of the aforementioned achievements in the diagnosis of brain tumors, new treatment options have been introduced, which respond more successfully to the handling of the several tumor entities. Due to the immense progress, not only in the field of diagnosis but also in the treatment of brain tumors, it is of utmost importance to present the newly identified biomarkers and innovative techniques, which allow, on the one hand, a more accurate diagnosis

and on the other hand a more precise therapeutic intervention Since a lot of research is conducted at present with this regard the result of these investigations should be shared with the broader research community in order to improve thereafter both the available diagnostic methods in the fields of histopathology and imaging and the therapeutic techniques in the areas of neurosurgery and chemo radiotherapy Undoubtfully this will contribute substantially in the accomplishment of the target of personalized medicine in the public The current Research Topic aims to bring together new discoveries in the diagnosis and therapy of pediatric and adult brain tumors In this context there is an open invitation to all the researchers and clinicians who are involved in this area to participate actively by contributing their valuable results and experiences with research focused on primary brain tumors Moving towards our actual goal as medical society which is not other than the implementation of personalized medicine our actual topic could be of particular value in the accomplishment of some of its fundamentals namely i precise diagnosis ii personalized intervention iii patient s participation iv prediction and prevention of the disease and v supportive care neurorehabilitation Manuscripts that are primarily in silico bioinformatics based including prognostic algorithms using large databases and do not have sufficient validation in an independent cohort of patients from one or more institutions rather than using another database and or functional validation in at least two acceptable tumor cell lines in vitro in vivo will not be considered      **Subarachnoid Haemorrhage** Ram P.
