Norman, 2009 As the use of sport in pursuit of development objectives becomes increasingly common there is a pressing need to determine if and how sport can be productively used to promote peace in divided societies While sport is commonly presented as an inherently positive phenomenon a deeper examination of its role in divided societies reveals a conflicted picture of its value While it can help to build bridges between antagonistic groups sport can also exacerbate conflict and reinforce division This paper recognizes the contradictory nature of sport and examines its social impact in divided societies It argues that spectator sport has an extremely limited peacebuilding potential and a significant capacity to reinforce division and perpetuate violence Participatory sport however offers more hope as a tool for peace and there is reason to believe that if appropriately implemented it may make a modest contribution to broader peacebuilding efforts

The role of sport within communities has been promoted with a wide range of goals such as environmental considerations, encouragement of civic pride, enhancement of confidence and self-esteem, and development of social cohesion as well as the fostering of a fit and healthy workforce. To address these issues, a number of programmes have been funded and supported to develop the role of sport in communities worldwide and to increase participation and access to sport and physical activities in rural areas. In addition, we are witnessing the development of new sports communities through social media such as Facebook and My Space. The concern is that we need to revisit the concept of community and sport and to investigate the current understanding of these terms in view of the evolving role of sport in a range of national settings. This book will present the platform upon which this process can be undertaken and offers a fundamental re-evaluation of the relationship that currently exists between sport and communities throughout selected parts of the world.
