Wildland Fire, Forest Dynamics, and Their Interactions Marc-André Parisien, Enric Batllori, Carol Miller, Sean A. Parks, 2018-08-15 This book is a printed edition of the Special Issue Wildland Fire Forest Dynamics and Their Interactions that was published in *Forests*

The Seasonal Nature of Fires , Fire in North American Tallgrass Prairies Scott L. Collins, Linda L. Wallace, 1990 Based on papers presented at a 1987 symposium Fire in North American Grasslands cosponsored by the Ecological Society of America and the Botanical Society of America this book represents an important contribution to key unanswered questions concerning the role of fire in grassland ecosystems How often did fires occur in the past Were they primarily natural or caused by humans At what time of year did grasslands normally burn How should fire be used as a management tool What constitutes a proper prescribed burning regime both with and without grazing

Fire Ecology and Prescribed Burning in the Great Plains Henry A. Wright, 1979

Insects, Fire and Conservation Tim R. New, 2014-09-03 A global synthesis of the impacts of wildfires and controlled burning on insects bringing together much hitherto scattered information to provide a guide to improved conservation management practice The great variety of responses by insect species and assemblages demonstrates the often subtle balance between fire being a severe threat and a vital management component Examples from many parts of the world and from diverse biotopes and production systems display the increasingly detailed appreciation of fire impacts on insects in terrestrial and freshwater environments and the ways in which prescribed burning may be tailored to reduce harmful ecological impacts and incorporated into protocols for threatened species and wider insect conservation benefits

Indiana Dunes National Lakeshore, West Beach Unit, Proposed Comprehensive Design , 1975

Ecological Effects of Prescribed Fire Season Eric E. Knapp, 2010-10 Historical and prescribed fire regimes for different regions in the continental U S were compared and literature on season of prescribed burning synthesized In regions and vegetation types where considerable differences in fuel consumption exist among burning seasons the effects of prescribed fire season appears to be driven more by fire intensity differences among seasons than by phenology or growth stage of organisms at the time of fire Where fuel consumption differs little among burning seasons the effect of phenology or growth stage of organisms is often more apparent because it is not overwhelmed by fire intensity

differences Species in ecosystems that evolved with fire appear to be resilient to one or few out of season prescribed burns
