and more efficient be it in everyday life at work or in organizations However the question remains open as to what profound and sometimes latent consequences for humans as social beings and social coexistence are associated with the use and development of AI How is the relationship between people and technology changing through AI and how should this change be assessed What opportunities and risks do the use and development of AI open up for people and society What are the limits of change and what design options are available And last but not least What and who determines the development paths that AI takes with what consequences and for whom Some of the articles in this volume have been automatically translated into English by Springer machine translation by the service DeepL com The contributions were then thoroughly revised corrected and supplemented by the authors The authors are therefore responsible not only for the content but also for the linguistic form of the articles Nevertheless the text of the book may differ stylistically from a conventional translation

Kalifungwa, 2025-03-19 All knowledge including the most basic taken for granted common sense knowledge of everyday reality is derived from and maintained by social interaction In their model people interact on the understanding that their perceptions of everyday life are shared with others and this common knowledge of reality is in turn reinforced by this interaction Social structure can also be said to be the framework upon which a society is established It determines the norms and patterns of relations between the various institutions of the society Social norms are believed to influence social structures through relations between the majority and the minority As those who align with majority are considered normal and those who align with the minority are considered abnormal majority minority relations create a hierarchical stratification within social structures that favors the majority in all aspects of society
