R. Bowker LLC,1979-05 Sodium: Its Biologic Significance Solomon Papper,Jerry K. Aikawa,2018-05-04 Sodium is concerned with the physiology pathophysiology and clinical consequences of altered physiology involving the sodium ion The first section focuses on the presence and handling of sodium in the normal state In chapter one Drs Solomon and Galey deal with the fundamentals of transport and energy metabolism as they relate to sodium This is followed by a chapter in which Drs Gardenswartz and Schrier consider in detail the normal body economy of sodium and especially the factors particularly extracellular fluid volume that regulate the renal handling of sodium and the responses of the various portions of the nephron to these influences **Sodium: Its Biologic Significance** S Papper (Ed),1982 **The Role of Potassium and Sodium Group in Biology and Medicine** Rudolf Keller,1946 **Biological and Behavioral Aspects of Salt Intake** Morley Richard Kare,Melvin J. Fregly,Rudy A. Bernard,1980 Biological and Behavioral Aspects of Salt Intake *The Sodium Pump* Ernst Bamberg,Wilhelm Schoner,2012-02-14 The sodium of animal cell membranes converts the chemical energy obtained from the hydrolysis of adenosine 5 triphosphate into a movement of the cations Na and K against an electrochemical gradient The gradient is used subse quently as an energy source to drive the uptake of metabolic substrates in polar epithelial cells and to use it for purposes of communications in excitable cells The biological importance of the sodium pump is evident from the fact that be tween 20 70% of the cell s metabolic energy is consumed for the pumping pro cess Moreover the sodium pump is an important biological system involved in regulatory processes like the maintenance of the cells and organism s water me tabolism It is therefore understandable that special cellular demands are han dled better by special isoforms of the sodium pump that the expression of the sodium pump and their isoforms is regulated by hormones as is the activity of the sodium pump via hormone regulated protein kinases Additionally the sodium pump itself seems to be a receptor for a putative new group of hormones the endogenous digitalis like substances which still have to be defined in most cases in their structure This group of substances has its chemically well known coun terpart in steroids from plant and toad origin which are generally known as car diac glycosides They are in medical use since at least 200 years in medicine in the treatment of heart diseases *The Sodium Pump* Ernst Bamberg,Wilhelm Schoner,1994-08-05 The sodium of animal cell membranes converts the chemical energy obtained from the hydrolysis of adenosine 5 triphosphate into a movement of the cations Na and K against an electrochemical gradient The gradient is used subse quently as an energy source to drive the uptake of metabolic substrates in polar epithelial cells and to use it for purposes of communications in excitable cells The biological importance of the sodium pump is evident from the fact that be tween 20 70% of the cell s metabolic energy is consumed for the pumping

process Moreover the sodium pump is an important biological system involved in regulatory processes like the maintenance of the cells and organism's water metabolism It is therefore understandable that special cellular demands are handled better by special isoforms of the sodium pump that the expression of the sodium pump and their isoforms is regulated by hormones as is the activity of the sodium pump via hormone regulated protein kinases Additionally the sodium pump itself seems to be a receptor for a putative new group of hormones the endogenous digitalis like substances which still have to be defined in most cases in their structure This group of substances has its chemically well known counterpart in steroids from plant and toad origin which are generally known as cardiac glycosides They are in medical use since at least 200 years in medicine in the treatment of heart diseases
