

Software Architecture Styles

separates read and write operations for a data store. It enables independent scaling of read and write workloads and optimizes them separately.

- separates software into logical layers

separates a minimal functional core from extended functionality and customer-specific parts.

This architecture designs a software application as a suite of independently deployable, small, modular services.

This resolves the issues of data consistency, reliable performance, and scalability for large-scale distributed systems.

focuses on the domain logic and complexity rather than the technology used.

Orchestration Architecture
a central coordinator (often called an orchestrator) that directs the interaction between services. The orchestrator is responsible for managing the control flow and data flow between services.

derivative of the Model-View-Controller (MVC) pattern, which aims to separate the concerns of data management, user interface, and control flow.

Event-Driven Architecture
promotes the production, detection, consumption of, and reaction to events.

The Architecture of Scientific Software Ronald F. Boisvert, Ping Tak Peter Tang, 2013-04-17 Scientific applications involve very large computations that strain the resources of whatever computers are available Such computations implement sophisticated mathematics require deep scientific knowledge depend on subtle interplay of different approximations and may be subject to instabilities and sensitivity to external input Software able to succeed in this domain invariably embeds significant domain knowledge that should be

tapped for future use Unfortunately most existing scientific software is designed in an ad hoc way resulting in monolithic codes understood by only a few developers Software architecture refers to the way software is structured to promote objectives such as reusability maintainability extensibility and feasibility of independent implementation Such issues have become increasingly important in the scientific domain as software gets larger and more complex constructed by teams of people and evolved over decades In the context of scientific computation the challenge facing mathematical software practitioners is to design develop and supply computational components which deliver these objectives when embedded in end user application codes The Architecture of Scientific Software addresses emerging methodologies and tools for the rational design of scientific software including component integration frameworks network based computing formal methods of abstraction application programmer interface design and the role of object oriented languages This book comprises the proceedings of the International Federation for Information Processing IFIP Conference on the Architecture of Scientific Software which was held in Ottawa Canada in October 2000 It will prove invaluable reading for developers of scientific software as well as for researchers in computational sciences and engineering

Software Architectures and Tools for Computer Aided Process Engineering Bertrand Braunschweig, Rafiqul Gani, 2002-10-30 The idea of editing a book on modern software architectures and tools for CAPE Computer Aided Process Engineering came about when the editors of this volume realized that existing titles relating to CAPE did not include references to the design and development of CAPE software Scientific software is needed to solve CAPE related problems by industry academia for research and development for education and training and much more There are increasing demands for CAPE software to be versatile flexible efficient and reliable This means that the role of software architecture is also gaining increasing importance Software architecture needs to reconcile the objectives of the software the framework defined by the CAPE methods the computational algorithms and the user needs and tools other software that help to develop the CAPE software The object of this book is to

bring to the reader the software side of the story with respect to computer aided process engineering **Software Modeling and Design** Hassan Gomaa, 2011-02-21 This book covers all you need to know to model and design software applications from use cases to software architectures in UML and shows how to apply the COMET UML based modeling and design method to real world problems The author describes architectural patterns for various architectures such as broker discovery and transaction patterns for service oriented architectures and addresses software quality attributes including maintainability modifiability testability traceability scalability reusability performance availability and security Complete case studies illustrate design issues for different software architectures a banking system for client server architecture an online shopping system for service oriented architecture an emergency monitoring system for component based software architecture and an automated guided vehicle for real time software architecture Organized as an introduction followed by several short self contained chapters the book is perfect for senior undergraduate or graduate courses in software engineering and design and for experienced software engineers wanting a quick reference at each stage of the analysis design and development of large scale software systems Software Architectures for Product Families Frank van der Linden, 2003-06-29 This book contains the proceedings of a third workshop on the theme of Software Architecture for Product Families The first two workshops were organised by the ESPRIT project ARES and were called Development and Evolution of Software Architectures for Product Families Proceedings of the first workshop held in November 1996 were only published electronically at <http://www.dit.upm.es/ares> Proceedings of the second workshop held in February 1998 were published as Springer LNCS 1429 The ARES project was finished in February 1999 Several partners continued operation in a larger consortium ITEA project 99005 ESAPS As such it is part of the European Eureka 2023 programme The third workshop was organised as part of the ESAPS project In order to make the theme of the workshop more generic we decided to rename it International Workshop on Software Architectures for Product Families As with the earlier two workshops we managed to bring together people working in the software architecture of product families and in software product line engineering Submitted papers were grouped in five sessions Moreover we introduced two sessions one on configuration management and one on evolution because we felt that discussion was needed on these topics but there were no submitted papers for these subjects Finally we introduced a surveys session giving an overview of the present situation in Europe focussed on ESAPS and in the USA focussed on the SEI Product Line Systems Program
