What is Protected in a Computer Program Josef Drexler,1994-11-29 The first few years of the 90s have been extremely important for the development of software copyright both in the United States and Europe In the United States major decisions redefined the idea expression dichotomy in different cases In Europe countries are still in the process of harmonizing their national laws with the EC Software Directive The study compares traditional and evolving copyright standards as applied to computer programs on both sides of the Atlantic It may well be said that recent case law has brought America closer to Europe On the other hand American experience turns out to be a useful guideline for distinguishing between the concepts of idea and expression in the sense of the software directive

Software Copyright Law David I. Copyright Protection of Computer Software in the United Kingdom Stanley Lai,2000-06-26 This work analyses the scope of copyright protection for computer software in the United Kingdom and examines challenges for the future The work presents the case for the adoption and application of infringement methodology emanating from the courts in the United States resulting in a narrower scope of protection than is presently argued for by many UK academics practitioners and judges alike The work makes a careful evaluation of the efficacy of the various prevailing tests for infringement of copyright in software and their progenies suggesting an improved formula and advocating the utility of limiting doctrines to assist in the determination of substantial similarity of particular non literal software elements user interfaces and screen display protection The monograph also contains a detailed study of reverse engineering copyright defences permitted acts database protection and the copyright contract interface in the context of computer software not omitting crucial discussions of the internet digital dissemination and the impact of recent treaty and legislative initiatives on British copyright law As such it will be an

Copyright Law and Computer Programs Jisuk Woo, 2014-06-03 This book analyzes U S federal cases on the copyright protection of computer software programs to examine the role of communication in legal decision making process It is the first to apply Anthony Giddens theory of structuration to analyze law in a systematic and empirical way Previous studies considered law to be independent objective and neutral and even those that considered social structures and actors focused on economic and political factors Employing the framework of the author the work and the use this study attempts to show how relationships and struggles of the parties are actually manifested through communication and how the strategic communication of the parties influences the structural environment of copyright law There has been a long running debate over whether and how the copyright law evolved from the era of the print technology should be applied to computer programs a new work of authorship Contrary to some cautionary arguments that modern copyright law tends to protect copyright holders while disregarding authors rights the struggle between developers and non developers rather than between copyright holders and non copyright holders was clearly manifested in legal arguments The construct of authorship has been modified yet remained central in copyright discourse On the other hand the concept of the use despite the significance of users in copyright regime has yet to be developed to play an important role in the legal arguments Moreover the factor of whether the party was a developing entity was found to be a single most important factor influencing the courts decisions But only when the party could successfully present itself as the one involved with developing activities the court was more likely to accept its argument than the other party's Therefore it was the legitimacy gained by communicating the nature of the party rather than the nature of the party itself that made the difference in the ways the courts made decisions This book presents how in this process of strategic communication the structure of copyright law was reproduced and transformed
