This book constitutes the thoroughly refereed post proceedings of the Third International Workshop on Software Engineering and Middleware SEM 2002 held in Orlando FL USA in May 2002 in collocation with ICSE 2002 The 15 revised full papers presented together with an invited contribution and a concluding summary were carefully selected from 27 submissions during two rounds of reviewing and revision The papers are organized in topical sections on architectures specification components and adaption technologies and services **Essential Software Architecture** Ian Gorton,2006-09-05 Job titles like Technical Architect and Chief Architect nowadays abound in the software industry yet many people suspect that architecture is one of the most overused and least understood terms in professional software development Gorton s book helps resolve this predicament It concisely describes the essential elements of knowledge and key skills required to be a software architect The explanations encompass the essentials of architecture thinking practices and supporting technologies They range from a general understanding of software structure and quality attributes through technical issues like middleware components and documentation techniques to emerging technologies like model driven architecture software product lines aspect oriented design service oriented architectures and the Semantic Web all of which will influence future software system architectures All approaches are illustrated by an ongoing real world example So if you work as an architect or senior designer or want to someday or if you are a student in software engineering here is a valuable and yet approachable source of knowledge Ian s book helps us to head in the right direction through the various techniques and approaches An essential guide to computer science students as well as developers and IT professionals who aspire to become an IT architect Anna Liu Architect Advisor Microsoft Australia **Introduction to Middleware** Letha Hughes Etzkorn,2017-06-12 A stereotype of computer science textbooks is that they are dry boring and sometimes even intimidating As a result they turn students interests off from the subject matter instead of enticing them into it This textbook is the opposite of such a stereotype The author presents the subject matter in a refreshing story telling style and aims to bring the Internet generation of students closer to her stories Yingcai Xiao The University of Akron Introduction to Middleware Web Services Object Components and Cloud Computing provides a comparison of different middleware technologies and the overarching middleware concepts they are based on The various major paradigms of middleware are introduced and their pros and cons are discussed This includes modern cloud interfaces including the utility of Service Oriented Architectures The text discusses pros and cons of RESTful vs non RESTful web services and also compares these to older but still heavily used distributed object component middleware The text guides readers to select an appropriate middleware technology to use for any given task and to learn new middleware technologies as they appear over time without being greatly overwhelmed by any new concept The book begins with an introduction to different distributed computing paradigms and a review of the different kinds of architectures architectural styles patterns and properties that various researchers have used in the past to

examine distributed applications and determine the quality of distributed applications Then it includes appropriate background material in networking and the web security and encoding necessary to understand detailed discussion in this area The major middleware paradigms are compared and a comparison methodology is developed Readers will learn how to select a paradigm and technology for a particular task after reading this text Detailed middleware technology review sections allow students or industry practitioners working to expand their knowledge to achieve practical skills based on real projects so as to become well functional in that technology in industry Major technologies examined include RESTful web services RESTful cloud interfaces such as OpenStack AWS EC2 interface CloudStack AJAX JAX RS ASP NET MVC and ASP NET Core non RESTful SOAP and WSDL based web services JAX WS Windows Communication Foundation distributed objects components Enterprise Java Beans NET Remoting CORBA The book presents two projects that can be used to illustrate the practical use of middleware and provides implementations of these projects over different technologies This versatile and class tested textbook is suitable depending on chapters selected for undergraduate or first year graduate courses on client server architectures middleware and cloud computing web services and web programming *5th International Workshop on Software Engineering and Middleware (SEM 2005)*, 2007-08-02

Distributed Event-Based Systems Gero Mühl, Ludger Fiege, Peter Pietzuch, 2006-08-02 In today's world services and data are integrated in ever new constellations requiring the easy flexible and scalable integration of autonomous heterogeneous components into complex systems at any time Event

based architectures inherently decouple system components Event based components are not designed to work with specific other components in a traditional request reply mode but separate communication from computation through asynchronous communication mechanisms via a dedicated notification service M hl Fiege and Pietzuch provide the reader with an in depth description of event based systems They cover the complete spectrum of topics ranging from a treatment of local event matching and distributed event forwarding algorithms through a more practical discussion of software engineering issues raised by the event based style to a presentation of state of the art research topics in event based systems such as composite event detection and security Their presentation gives researchers a comprehensive overview of the area and lots of hints for future research In addition they show the power of event based architectures in modern system design thus encouraging professionals to exploit this technique in next generation large scale distributed applications like information dissemination network monitoring enterprise application integration or mobile systems

Metalevel Architectures and Separation of Crosscutting Concerns Akinori Yonezawa, Satoshi Matsuoka, 2003-06-30 This volume constitutes the proceedings of REFLECTION 2001 the Third International Conference on Metalevel Architectures and Separation of Crosscutting Concerns which was held in Kyoto September 25-28 2001 Metalevel architectures and reflection have drawn the attention of researchers and practitioners throughout computer science Reflective and metalevel techniques are being used to address real world problems in such areas as programming languages operating systems databases distributed computing expert systems and web computing Separation of concerns has been a guiding principle of software engineering for nearly 30 years but its known benefits are seldom fully achieved in practice This is primarily because traditional mechanisms are not powerful enough to handle many kinds of concerns that occur in practice Over the last 10 years to overcome the limitations of traditional frameworks many researchers including several from the reflection community have proposed new approaches For the first time papers on advanced approaches to separation of concerns were explicitly solicited Following the success of previous conferences such as IMSA 92 in Tokyo Reflection 96 in San Francisco and Reflection 99 in Saint Malo we hope that the conference provided an excellent forum for researchers with a broad range of interests in metalevel architectures reflective techniques and separation of concerns in general
