- It used to be low-level and device dependent packages supplied by the vendor, making it very difficult to port the software.
- We have now moved to high-level device independent packages, which allow much easier porting of software.
- Several standard device-independent graphics libraries are based on geometric modeling.

portability and interoperability between computer systems in today's multivendor environments. Users would be able to more easily purchase new equipment and technologies and cost effectively reuse their applications. And they could more easily connect heterogeneous equipment in different departments without having to constantly write and rewrite interfaces. On the other hand, many users in various organizations do not understand the ramifications of general purpose versus real time UNIX. Users tend to think of real time as a way to handle exotic heart monitoring or robotics systems. Then these users use UNIX for transaction processing and office applications and complain about its performance robustness and reliability. Unfortunately, the users don't realize that real time capabilities added to UNIX can provide better performance robustness and reliability for these non real time applications. Many other vendors and users do realize this, however. There are indications even now that general purpose UNIX will go away as a separate entity. It will be replaced by a real time UNIX. General purpose UNIX will exist only as a subset of real time UNIX. *Federal Information Processing Standards Publication*, 1985. **CAD/CAM** Kuldeep Sareen | Chandandeep Grewal, 2008. *CAD CAM* **Federal Register**, 2012-03. *Portability of Process-Aware and Service-Oriented Software* Jörg Lenhard, 2016-04-19. *Computer Procurement* United States. Advanced Technologies Applied to Training Design Robert J. Seidel, Paul R. Chatelier, 2012-12-06. This collection of papers is the result of a workshop sponsored by NATO's Defense Research Group Panel 8 in the Fall of 1991. The workshop is the second of a series, the first of which was held in the Spring of 1985. As you study these papers, recall that this workshop occurred during the time that many changes were occurring in Eastern Europe and world-wide. The need to identify training technologies for maintaining a capable and ready force during times of decreases in military force structure was and is currently our challenge. The opportunities for these technologies to provide a service and opportunity for nonmilitary usage is our future. Therefore, this workshop maintained its focus on technology and application regardless of the user. These and other statements made herein are personal and reflect the opinions of the author(s) and in no way represent the official position or policy of our individual governments. v **PREFACE** The truly international contributions to this book reinforced our belief that training technology must be collaborative and data widely shared to strengthen our future. We want to thank the authors of these papers for their abilities to see beyond the near horizon. Their contributions and the support of the organizations that sponsored their work is greatly appreciated. We also gratefully recognize the contributions of all who attended the workshop. **A Five-year Plan for Meeting the Automatic Data Processing and Telecommunications**
