Phytochemical Resources for Medicine and Agriculture H.N. Nigg, D. Seigler, 2013-06-29 This book was the result of a symposium held at the American Chemical Society meeting in Miami Beach Florida September 10-15 1989 The symposium was jointly sponsored by The Society for Economic Botany and the American Chemical Society Food and Natural Product sub division There were five speakers During the social sessions mostly over drinks in a hotel room it became obvious that regardless of the discipline we were all speaking the same language Yet prior to the symposium only a few of the participants knew one another We decided to expand the symposium into a book The book would help accomplish for others what we had discovered in ourselves That is the field of Natural Products is broad but similar in techniques and approach ancient but modern and has been and continues to be extremely valuable to humankind We wanted the book to serve as an introductory text for courses and as a reference work for the future We also determined to include the structure of every chemical in the chapter where it was mentioned so the reader would not have to find the structure somewhere else or to try and deduce the structure from the chemical name Little did we know what an undertaking these goals would be or the time this would take

Reproductive Biology and Taxonomy of Vascular Plants. J. G. Hawkes, 2013-09-17. Reproductive Biology and Taxonomy of Vascular Plants is a collection of papers presented at the Conference on Reproductive Biology and Taxonomy of Vascular Plants held at the Department of Botany, University of Birmingham, on April 23-25, 1965. The conference primarily explores the reproductive biology of flowering plants and ferns to arrive at a better understanding of variation patterns and modes of evolution. This book is divided into six chapters and begins with a discussion on the breeding systems, variation, and adaptation. The next chapters survey the practical implications of knowledge of breeding systems and other aspects of the reproductive biology of flowering plants, as well as the pollination mechanisms in orchids and the evolution of this family in relation to insect evolution. These chapters include an account of the foraging behavior of honey bees and its importance to the botanist in delineating the behavior of the insects that pollinate the plants. Other chapters deal with the mechanisms of plant dispersal and establishment, the aspects of seed dormancy and germination, and reproductive capacity related to evolutionary processes. The concluding chapters explore the many aspects of apomixis in its wider sense and survey how the variation patterns of apomicts were due to this special mode of reproduction. This book is directed primarily to botanists.
