Waste Biorefineries: Future Energy, Green Products and Waste Treatment Mohammad Rehan, Abdul-Sattar Nizami, Umer Rashid, Muhammad Raza Naqvi, 2019-09-24 Energy recovery from waste resources holds a significant role in the sustainable waste management hierarchy to support the concept of circular economies and to mitigate the challenges of waste originated problems of sanitation environment and public health Today waste disposal to landfills is the most widely used methodology particularly in developing countries because of limited budgets and lack of efficient infrastructure and facilities to maintain efficient and

practical global standards As a consequence the dump sites or non sanitary landfills have become the significant sources of greenhouse gases emissions soil and water contamination unpleasant odors leachate and disease spreading vectors flies and rodents However waste can be utilized to produce a range of potential products such as energy fuels and value added products under waste biorefineries A holistic and quantitative view such as waste biorefinery on waste management must be linked to the actual country taking into account its socio economic situation local waste sources and composition as well as the available markets for the recovered energy and products Therefore it is critical to understand that solutions cannot be just copied from one region to the others In fact all waste handling transportation and treatment can represent a burden to the cities environment and macro and micro economics except for the benefits obtained from recovered materials and energy Equally significant is a clear and quantitative understanding of the industrial and public potential of utilizing recovered materials and energy in the markets as these can be reached without exacerbating the environmental issues using excessive transport The book explores new advancements and discoveries on the development of emerging waste to energy technologies practical implementation and lessons learned from sustainable wastemanagement practices under waste biorefinery concept which will accelerate the growth of circular economies in the world The articles presented in this book have been written by expert researchers and academics working in institutions at different countries across the world including Germany Greece Japan South Korea China Saudi Arabia Pakistan Indonesia Malaysia Iran and India The research articles have been arranged into three main subject categories 1 Resource recovery from waste 2 Waste to energy technologies and 3 Waste biorefineries This book will serve as an important resource for research students academics industry policy makers and government agencies working in the field of integrated waste management energy and resource recovery waste to energy technologies waste biorefineries etc The editorial team of this book is very grateful to all the authors for their excellent contributions and making the book successful
