Solar Energy Application In The Tropics:

Solar Energy Applications in the Tropics B.B.P. Lim, 2012-12-06 Renewable energy sources such as solar energy were advocated even before the energy crisis in 1973 Subsequent development in solar energy has been remarkable Indeed it has been one of the most studied and researched topics in recent years Much of the technology in the utilization of solar energy has been associated with housing and industrial applications and to a smaller extent with commercial use The nature of the utilization has been related to the philosophy of independence or autonomy in that each housing or industrial unit is made self sufficient by the installation of solar energy equipment The general aim of the development of solar energy has been to substitute existing energy sources by solar energy especially among the developed countries in the temperate regions In developing countries the application of solar technology has been more acceptable in rural areas where conventional infrastructure is under developed A different direction is necessary for the development of solar energy in urban areas Buildings are inter related and have been dependent on the conventional infrastructure The consumption of energy is many times more than that in the rural areas A new approach to urban development must be generated and studies should be made on the feasibility and viability of using solar energy for urban settlements *Clean Energy Opportunities in Tropical Countries* Shaharin A. Sulaiman, 2021-01-21 This book highlights the present scenario of energy demand and power generation technologies in tropical countries The tropics are well known to receive direct sunlight Furthermore different than four season countries tropical countries have a continuous summer like season and therefore they are rich in clean energy sources like solar and biomass Home to 40% of the world's population the demand for energy in these countries keeps increasing With the present serious global concern on the environment the choice of power generation is no doubt the cleanest possible resources This book delves into the opportunity that various tropical countries have in pursuing environmentally friendly power generation systems **Energy and Environment in the Tropics** Shaharin Anwar Sulaiman, 2022-11-21 The tropical zones are dominated by developing countries which mainly face problematic environmental issues Different than four season countries tropical countries have a continuous summer like season and therefore they are rich in clean energy sources like solar and biomass Hence the mitigations of environment and energy issues in the tropics would require specific understanding and different approach to solutions This book offers an assortment of studies on scenarios of environment as well as energy demand and power generation technologies in the tropics Many of the countries within the tropics are highly populated and this results in various problems related to the environment and energy The demand for energy in these countries keeps increasing but concurrently there are also environmental issues that require serious attention As the global concern on the environment is alarming today the choice of power generation should be of the cleanest possible resource This various reports on research activities carried out in the tropics on the aspect of environment and energy presented in this book are highly beneficial for those who like to see an improvement in the tropics

with regard to environment and energy systems **Mainstreaming Solar Energy in Small, Tropical Islands** Kiron C. Neale, 2020-03-05 This book explores how cultural considerations can improve policymaking to achieve mainstream solar energy in small tropical islands Focusing on Trinidad Barbados and Oahu Kiron C Neale looks at how culture can affect and be affected by the policies that support the household adoption of two key energy technologies solar water heating and photovoltaics Drawing on interviews with residents and energy officials and an examination of the institutional socio economic and physical factors that affect energy systems such as governance structures and energy resource availability the author explores themes including the impact of insularity on energy transitions and behavioural and cultural change Overall this book rebrands policies as instruments of cultural change and puts forward recommendations applicable to all small tropical islands Following the islands transition to renewable energy this book will be of great interest to scholars of energy policy energy transitions climate change cultural studies and small states development as well as industry professionals working on energy policy implementation **Proceedings of the International Conference of Tropical Studies and Its Applications (ICTROPS 2022)** Tantra Diwa Larasati, Resty Intan Putri, Nur Rani Alham, Nur Asriatul Kholifah, Retno Wulandari, Pandu K. Modeling for Tropical Climates Ansar Khan,Soumendu Chatterjee,Yupeng Wang,2020-11-17 Urban Heat Island Modeling for Tropical Climates takes into account the different urban physics in tropical environments presenting a way of UHI scaling for tropical cities Topics include measuring modeling and proper mitigation strategies which account for the surface energy balance of tropics Tropical cities are more susceptible to the effects of projected global warming because of conditions in tropical climates and the rapid growth of so many cities in this zone The need for research on measuring modeling and mitigation of UHI effects in tropical cities is of growing importance This book walks through the basics of Urban Heat Islands including causes measurement and analysis then expands upon issues as well as the novel techniques that can be used to address issues specific to the region Reviews topics related to understanding the fundamentals of modeling and impacts of urban heat islands Covers many techniques from remote sensing to numerical modeling and then applying them to urban climate studies in general and in tropical cities Describes the scaling of urban heat islands based on long term seasonal thermal parameters as feature based classification systems using a probabilistic and fuzzy logic approach unlike local climate zones LCZs

Renewable Energy Resources And Rural Applications In The Developing World Norman L.

Brown,2019-06-18 The energy situation in developing countries is desperate Because these countries are primarily dependent on fossil fuels chiefly oil for industrial growth they have been hard hit by oil price increases Further in the rural areas where most of the population lives there are limited supplies of increasingly expensive diesel fuel or kerosene Noncommercial energy sources such as firewood dung and agricultural residues are generally used in rural areas but under the pressure of growing populations the forests are disappearing This is resulting in a critical shortage of firewood for cooking and heating as well as in the destruction of the environment In addition when dung and agricultural residues are burned valuable fertilizers are destroyed Thus the rural areas the sources of food and fiber face a particularly alarming situation
