Solar System Plasma Processes Louis J. Lanzerotti, Charles F. Kennel, Eugene Newman Parker, 1979      **Plasma Turbulence in the Solar System** Yasuhito Narita, 2012-01-19 Dynamics of astrophysical systems is often described by plasma physics yet understanding the nature of plasma turbulence remains as a challenge in physics in both theories and experiments This book is an up to date summary and review of recent results in research on waves and turbulence in near Earth space plasma turbulence obtained by Cluster the multi spacecraft mission Spatial and temporal structures of solar wind turbulence as well as its interaction with the bow shock ahead of the Earth are presented using Cluster data The book presents 1 historical developments 2 theoretical background of plasma physics turbulence theories and the plasma physical picture of the solar system 3 analysis methods for multi spacecraft data 4 results of Cluster data analysis and 5 impacts on astrophysics and Earth sciences      *Solar System Plasma Processes* Louis J. Priest,1985-10-31 In September 1984 a Summer School on Solar System Plasmas was held at Imperial College with the support of the Science and Engineering Research Council An excellent group of lecturers was assembled to give a series of basic talks on the various aspects of the subject aimed at Ph D students or researchers from related areas wanting to learn about the plasma physics of the solar system The students were so appreciative of the lectures that it was decided to write them up as the present book Traditionally different areas of solar system science such as solar and magnetospheric physics have been studied by separate communities with little contact However it has become clear that many common themes cut right across these distinct topics such as magnetohydrodynamic instabilities and waves magnetic reconnect ion convection dynamo activity and particle acceleration The plasma parameters may well be quite different in the Sun s atmosphere a cometary tail Jupiter s magnetosphere but many of the basic processes are similar and it is by studying them in different environments that we come to understand them more deeply Furthermore direct in situ measurements of plasma properties at one point in the solar wind or the magnetosphere complement the more global view by remote sensing of a similar phenomenon at the Sun
