comprised of a selection of the best papers presented during the 25th International Cartography Conference which was held in Paris between 3rd and 8th July 2011 The scope of the conference covers all fields of relevant GIS and Mapping research subjects such as geovisualization semiotics SDI standards data quality data integration generalization use and user issues spatio temporal modelling and analysis open source technologies and web services digital representation of historical maps history of GIS and cartography as well as cartography for school children and education *The Computer Music Tutorial, second edition* Curtis Roads, 2023-06-06 Expanded updated and fully revised the definitive introduction to electronic music is ready for new generations of students Essential and state of the art The Computer Music Tutorial second edition is a singular text that introduces computer and electronic music explains its motivations and puts topics into context Curtis Roads's step by step presentation orients musicians engineers scientists and anyone else new to computer and electronic music The new edition continues to be the definitive tutorial on all aspects of computer music including digital audio signal processing musical input devices performance software editing systems algorithmic composition MIDI and psychoacoustics but the

second edition also reflects the enormous growth of the field since the book's original publication in 1996. New chapters cover up to date topics like virtual analog pulsar synthesis, concatenative synthesis, spectrum analysis by atomic decomposition, Open Sound Control, spectrum editors, and instrument and patch editors. Exhaustively referenced and cross referenced, the second edition adds hundreds of new figures and references to the original charts, diagrams, screen images, and photographs in order to explain basic concepts and terms. Features: New chapters: virtual analog pulsar synthesis, concatenative synthesis, spectrum analysis by atomic decomposition, Open Sound Control, spectrum editors, instrument and patch editors, and an appendix on machine learning. Two thousand references support the book's descriptions and point readers to further study. Mathematical notation and program code examples used only when necessary. Twenty five years of classroom seminar and workshop use inform the pace and level of the material.

Performance Drawing Maryclare Foá, Jane Grisewood, Birgitta Hosea, Carali McCall, 2020-09-03. What is performance drawing? When does a drawing turn into a performance? Is the act of drawing in itself a performative process, whether a viewer is present or not? Through conversation, interviews, and essays, the authors illuminate these questions and what it might mean to perform and what it might mean to draw in a diverse and expressive contemporary practice since 1945. The term performance drawing first appeared in the subtitle of Catherine de Zegher's *Drawing Papers*. 20 Performance Drawings in particular, with reference to Alison Knowles and Elena del Rivero. In this book, it is used as a trope and a thread of thinking to describe a process dedicated to broadening the field of drawing through resourceful practices and cross disciplinary influence. Featuring a wide range of international artists, this book presents pioneering practitioners alongside current and emerging artists. The combination of experiences and disciplines in the expanded field has established a vibrant art movement that has been progressively burgeoning in the last few years. The Introduction contextualises the background and identifies contemporary approaches to performance drawing. As a way to embrace the different voices and various lenses in producing this book, the authors combine individual perspectives and critical methodology in the five chapters. While embedded in ephemerality and immediacy, the themes encompass body and energy, time and motion, light and space, imagined and observed, demonstrating how drawing can act as a performative tool. The dynamic interaction leads to a collective understanding of the term performance drawing and addresses the key developments and future directions of this applied drawing process.

A Theory of Music Analysis Dora A. Hanninen, 2012. This book introduces a theory of music analysis that one can use to explore aspects of segmentation and associative organization in a wide range of repertoire including Western classical music from the Baroque to the present, with potential applications to jazz and popular music, and some non-Western musics. Rather than a methodology, the theory provides analysts with precise language and a broad, flexible conceptual framework through which they can formulate and investigate questions of interest and develop their own interpretations of individual pieces and passages. The theory begins with a basic distinction among three domains of musical experience and discourse about it: the sonic, psychoacoustic, the

contextual or associative sparked by varying degrees of repetition and the structural guided by a specific theory of musical structure or syntax invoked by the analyst A comprehensive presentation of the theory with copious musical illustrations is balanced with close analyses of works by Beethoven Debussy Nancarrow Riley Feldman and Morris Dora A Hanninen is professor of music theory at the University of Maryland She received the 2010 Outstanding Publication Award from the Society for Music Theory
