Win new business
Determine which promotional materials have the greatest impact on a customer's product purchase interest level (low, medium, high) using the PLUM procedure.

Increase customer loyalty
Survival analysis identifies customers likely to defect, so you can keep customers happy.

Increase cross-selling
Use the GLM procedure to define segments based on product-specific, purchase-related variables; then profile those segments based on background characteristics.

Understand customer preferences
Determine which customers are most interested in buying your products and discover how their interest varies over time.

Work with nested data, such as students within classrooms or consumers within households, to improve the accuracy of your models. Linear Mixed Models give you the flexibility to formulate a wide variety of models as well as repeated measurements.

Analyze complex relationships using a high-end modeler's toolkit

SPSS Advanced Models™ has the procedures you need to move beyond basic data analysis.

Make your analysis more accurate and get more dependable conclusions with statistics designed to fit the inherent characteristics of your data. SPSS Advanced Models provides a powerful set of sophisticated univariate and multivariate analytical techniques for real-world problems, such as:

- Medical research: analyzing patient survival rates
- Manufacturing: assessing production processes
- Pharmaceutical: reporting test results to the FDA
- Market research: determining product interest

Build flexible models
The General Linear Model (GLM) procedure gives you more flexibility to describe the relationship between a dependent variable and a set of independent variables. Models include linear regression, ANOVA, ANCOVA, MANOVA and MANCOVA. GLM also includes capabilities for repeated measures, mixed models, post hoc tests and post hoc tests for repeated measures, four types of sums of squares, pairwise comparisons of expected marginal means, sophisticated handling of missing cells and the option to save design matrices and effect files.

Get more accurate predictive models when working with nested-structure data
Linear Mixed Models expand the General Linear Model used in the GLM procedure so that you can analyze data that exhibit correlation and non-constant variability. For example, work with data in which students are nested within classrooms or consumers are nested within households, to improve the accuracy of your models. Linear Mixed Models enables you to model not only means but also variances and covariances in your data. Its flexibility empowers you to formulate a wide variety of models. Work with repeated measure designs, including incomplete repeated measurements in which the number of observations varies across subjects. You can also formulate a wide variety of models, including Fixed Effects ANOVA Model, Randomized Complete Blocks Design, Split-Plot Design, Purely Random Effects Model, Random Coefficient Model, Multilevel Analysis, Unconditional Linear Growth Model, Linear Growth Model with a Person-Level Covariate, Repeated Measures Analysis, Repeated Measures Analysis with Time-Dependent Covariates.

Easily model your ranked outcomes
Use the polytomous universal model (PLUM) procedure to predict ordinal outcomes with more than two categories. For example, determine what predicts customer interest level (low, medium, high) in a product.

Advanced Transport and Spatial Systems Models Tschangho J. Kim,2012-12-06 The usual view in a mixed economy is that some goods and services are produced privately and some such as transportation are produced publicly Private institutions such as households and entrepreneurs produce and con sume goods and services in pursuing their parochial interests while the pub lic sector attempts to broaden public interests More precisely the public sector constructs new transportation systems improves their capaci ties and regulates services and prices and the private sector chooses locations of pro duction modes of transportation and routes of shipmellt At the sallie Lillte all forms of transportation influence our lives and cause us concern for Oll r environment health and safety Thus transportation is intimately woven into the daily life of individuals and organizations in our society Because of its constant presence transportation is easy to overlook until it fails in some way Few would contend that private firms could or should construct an effi cient transportation system in a mixed economic system Because the entire transportation system must be integrated and coordinated firms with the power to construct such a system would have considerable monopoly control   Next-Generation Business Models: The Role of Advanced Technologies in Defining the Future Bahaaeddin Alareeni,Allam Hamdan,2025-09-07 This book provides valuable insights into how advanced technologies are reshaping the modern business landscape As we navigate an era defined by rapid innovation and constant disruption businesses must rethink traditional models to stay competitive It explores the strategic integration of tools such as artificial intelligence blockchain and the Internet of Things highlighting their role in building agile resilient and future ready business models Through a blend of theoretical perspectives empirical research and real world case studies this book equips scholars and professionals with the knowledge and strategies needed to drive
