South African Ocean Colour And Upwelling Experiment:

South African Ocean Colour and Upwelling Experiment L. V. Shannon, 1985 **Upwelling Systems of the World** Jochen Kämpf, Piers Chapman, 2016-08-29 Upwelling systems are special places in the oceans where nutrient enriched water is brought into the euphotic zone to fuel phytoplankton blooms that via marine food web interactions create the world's richest fish resources This book introduces the reader to the interdisciplinary science of upwelling and provides a comprehensive overview of the world's most productive marine ecosystems in the context of climate variability climate change and human exploitation This material presented is suitable for undergraduate and postgraduate study or just for anyone interested to learn about the creation of life in the oceans and how this is compromised by human activities

Ocean Colour: Theory and Applications in a Decade of CZCS Experience Vittorio Barale, Peter M. Schlittenhardt, 2012-12-06 Optical remote sensing is of invaluable help in understanding the marine environment and its biogeochemical and physical processes The Coastal Zone Color Scanner CZCS which operated on board the Nimbus 7 satellite from late 1978 to early 1986 has been the main source of ocean colour data Much work has been devoted to CZCS data processing and analysis techniques throughout the 1980s After a decade of experience the Productivity of the Global Ocean PGO Activity which was established in the framework of the International Space Year 1992 ISY 92 by SAFISY the Space Agency Forum of ISY sponsored a workshop aimed at providing a reference in ocean colour science and at promoting the full exploitation of the CZCS historical data in the field of biological oceanography The present volume comprises a series of state of the art contributions on theory applications and future perspectives of ocean colour After an introduction on the historical perspective of ocean colour a number of articles are devoted to the CZCS theoretical background on radiative transfer and in water topics as well as on calibration atmospheric correction and pigment concentration retrieval algorithms developed for the CZCS Further a review is given of major applications of CZCS data around the world carried out in the past decade The following part of the book is centered on the application of ocean colour to the assessment of marine biological information with particular regard to plankton biomass primary productivity and the coupling of physical biological models The links between global oceanic production and climate dynamics are also addressed Finally the last section is devoted to future approaches and goals of ocean colour science and to planned sensors and systems The book is required reading for those involved in ocean colour and related disciplines providing an overview of the current status in this field as well as stimulating the debate on new ideas and developments for upcoming ocean colour missions Sustainability of Southern African Ecosystems under Global Change Graham P. von Maltitz, Guy F. Midgley, Jennifer Veitch, Christian Brümmer, Reimund P. Rötter, Finn A. Viehberg, Maik Veste, 2024-01-05 This open access book about the sustainability of marine and terrestrial ecosystems in southern Africa provides a synthesis of the research program Science Partnerships for the Adaptation to Complex Earth System Processes SPACES II 2018 2022 It addresses the scientific social and economic issues related to

climate change its potential impacts on the various ecosystems adaptations and management interventions for enhancing systems resilience in Southern Africa It is written by numerous scientists from African states and Germany and summarizes the latest research findings which are of great relevance for a better understanding of climate change impacts adaptations and vulnerabilities as well as for developing management options and policy options to reduce the associated risks This is crucial considering that the projected African population increase is exceptional Furthermore climate change is assumed to hit southern Africa extremely hard with a significant increase in extreme events and the frequency of severe droughts heat waves and flooding Southern Africa hosts a high variety of ecosystems which belongs to important biodiversity hotspots for unique flora and fauna The surrounding oceans form in turn a bottle neck within the ocean s global thermohaline circulation act as a still poorly understood carbon sink and source and play an important role for fisheries as they are highly productive Considering these important aspects the book is an important interdisciplinary contribution to the scientific literature and will find a wide readership The book is aimed at students teachers and scientists in the fields of terrestrial and marine ecology environmental nature and landscape planning agriculture environmental and resource management biodiversity and nature conservation as well as scientists and representatives in specialised authorities and associations nature conservationists and policy makers of related disciplines

The Agulhas Current Johann R.E. Lutjeharms,2006-08-26 The Agulhas Current is one of the major currents of the world ocean In the network of currents that connect the major ocean basins it forms a key link This linkage may be of critical importance in the way the ocean affects the earth s climate and climate change Based on the research findings of 60 years the author describes the origins of the Agulhas Current its behaviour its influence on the adjacent continental shelf its effect on local weather as well as its role in linking the Indian and the Atlantic Ocean The text is well illustrated and includes small asides on the history of research on the Agulhas Current An exhaustive bibliography gives easy access to present knowledge on this important current system *South African Journal of Marine Science* ,1998

Oceanography and Marine Biology R. N. Gibson,R. J. A. Atkinson,J. D. M. Gordon,2004-07-28 Ever increasing interest in oceanography and marine biology and its relevance to global environmental issues creates a demand for authoritative reviews summarizing the results of recent research Oceanography and Marine Biology An Annual Review has answered this demand since its founding by the late Harold Barnes more than forty years ago Its objective is an annual consideration of basic areas of marine research dealing with subjects of special or immediate importance adding new subjects as they arise The volumes maintain a unified perspective on the marine sciences Physical chemical and biological aspects of marine science are dealt with by experts actively engaged in these fields This essential reference text for researchers and students in all fields of marine science finds a place in libraries of marine stations and institutes as well as universities It consistently ranks among the highest in impact factors for the marine biology category of the citation indices compiled by the Institute for Scientific Information Volume 42 contains analysis on convective chimneys in the Greenland Sea

spawning aggregations of coral reef fishes exopolymers EPS in aquatic systems the marine insect Halobates and much more

The South Atlantic Gerold Wefer, Wolfgang H. Berger, Gerold Siedler, David J. Webb, 2012-12-06 The book presents results of recent projects in oceanography and marine geosciences e g WOCE JGOFS PAGES ODP regarding present and past circulation in the South Atlantic The objective of the book is to integrate results from both oceanographic and geological studies As the connecting link between the Antarctic and the North Atlantic the South Atlantic plays a crucial role with regard to the heat budget of the North Atlantic and to the biogeochemical budget of the global ocean New results from studies of meridional water mass and heat transports are presented The central theme of geological investigations is the reconstruction of current and productivity systems in the South Atlantic during the late Quaternary *The Sea, Volume 14B: the Global Coastal Ocean* Allan R. Robinson, Kenneth H. Brink, 2006 In multidisciplinary efforts to understand and manage our planet contemporary ocean science plays an essential role Volumes 13 and 14 of *The Sea* focus on two of the most important components in the field of ocean science today the coastal ocean and its interactions with the deep sea and coupled physical biogeochemical and ecosystem dynamics *The Global Coastal Ocean - Regional Studies and Syntheses* Kenneth H. Brink, Allan R. Robinson, 2005
