Climate Development and History of the North Atlantic Realm Gerold Wefer, Wolfgang H. Berger, Karl-Ernst Behre, Eystein Jansen, 2013-03-09 The global environment is changing rapidly under the impact of human activities and an important element of this change is related to global climate modification Can the study of climate and history help in devising strategies for coping with this change What might be the type of information most useful in this context What are the pitfalls awaiting the unwary These are the kinds of questions that led us to bring together experts from the natural and social sciences with a strong interest in history to promote discussion between workers in different disciplines by focussing on a common topic of great interest to society The meeting was arranged in the framework of a Hanse Conference within the interdisciplinary program of the Hanse Wissenschaftskolleg a foundation set up to promote interdisciplinary studies in collaboration between the universities of Bremen and Oldenburg The aim of the Hanse Conferences in general is to provide opportunities for experts from different fields of the sciences and humanities to come together and explore the larger

framework of topics of common interest. What unites the participants is their desire to look over the fence to neighboring disciplines. Young colleagues who wish to build an interdisciplinary career are particularly welcome. In the Hanse Conference on Climate and History we have endeavoured to build bridges between the climate sciences and the sociological sciences concerned with environmental impacts on human activities. The geological sciences we felt are especially well suited to the purpose because they already comprise historical aspects. Research in Building Physics J. Carmeliet, H. Hens, G.

Vermeir, 2020-12-17 This text provides a broad view of the research performed in building physics at the start of the 21st century. The focus of this conference was on combined heat and mass flow in building components, performance based design of building enclosures, energy use in buildings, sustainable construction, users' comfort and health and the urban micro climate.
