The Mountain Bluebird:

Mountain Bluebirds Lois Lake, 2018-08-24 In this book you will learn fun facts about mountain bluebirds *Sialia currucoides* with photographic illustrations and observations of their behavior The story covers a span of time from when the bluebirds first arrive in Colorado in the spring until they have their young and the babies become independent There are two species of bluebirds in Colorado The western bluebird *Sialia mexicana* can be readily recognized by the red feathers on the male's breast The mountain bluebird *S. currucoides* on the other hand has white feathers on the male's breast The female mountain bluebird is pale sky blue with a light colored chin a brownish back and may have a rufous tint on her breast in early spring This book is about the mountain bluebird *The Mountain Bluebird* Ron Hirschi, 1989 Text and photographs look at the life of that resident of the high valleys of the Rocky Mountains the mountain bluebird **Mountain Bluebird** Morgan Stewart, 2014 Idaho's state bird is the mountain bluebird Information about identifying mountain bluebirds their behavior habitat and nesting is presented *The Mountain Bluebird* Ron Hirschi, Burrell, Galen, 1988-01-01 Text and photographs look at the life of that resident of the high valleys of the Rocky Mountain the mountain bluebird Mountain Bluebird Lorne Scott, Canadian Wildlife Service, 1996 **Winter occurrence of the western bluebird and the mountain bluebird in Montana** Winton Weydemeyer, 1935 **Winter Feeding Habits of the Mountain Bluebird (*Sialia currucoides*) in Northern New Mexico**, 2008 The Mountain Bluebird *Sialia currucoides* is found in western North America and is known for the blue color that completely covers the male Martin et al 1951 The Mountain Bluebird habitat spans through the Rocky Mountains as well as the Sierra Cascade regions but winters in the milder parts of this geographic area which includes New Mexico Martin et al 1951 However Mountain Bluebirds in New Mexico are often permanent residents as well unpublished data During the summer breeding months the Mountain Bluebird consumes 92% of its diet in insects as well as other animal matter Bent 1942 However little is known about the diet of Mountain Bluebirds in the winter From December 2004 through February 2005 approximately 40 Mountain Bluebirds flocked together in Nambe New Mexico The arroyo habitat includes One seed Juniper *Juniperus monosperma* Silver Sagebrush *Artemisia cana* and sparse Narrowleaf Cottonwood *Populus angustifolia* Our focus was to analyze the winter feeding habits of the Mountain Bluebird in the northern area of New Mexico We collected a total of 115 97 grams Mountain Bluebirds droppings from the pond in the study area We sorted through the droppings to distinguish between different food types consumed and found that the winter diet consisted primarily of fruit seeds This is supported by Martin et al 1951 who states that fruits constitute most of the small proportion of plant material in the diet of the Mountain Bluebird Power and Lombardo 1996 who determined from stomach contents obtained over an entire period of a year the Mountain Bluebird diet consist of grapes currants elderberries sumac seeds mistletoe seeds and hackberry seeds The main fruit found was that of the One Seed Juniper which weighed 105 7 grams 91 2% of material collected The One Seed Juniper is one of five of juniper species found in Northern New Mexico Foxx and Hoard 1995 The One

Seed Juniper can be found in the southwestern United States in Texas New Mexico and Arizona It has a wide variety of elevation tolerances ranging from 3 000 feet to the ponderosa pine forests at around 7 500 feet Johnsen 1962 It can be characterized by the purple berries that shrivel when dried and is very important for providing food during the winter months for birds that rely on fruits Johnsen 1962 Martin 1951 Poddar and Lederer 1982 It is also noted that One Seed Juniper berries are very palatable to birds because of the sweet taste and can provide a lot of energy due to its high calories Salomonson 1978 The remaining berries that were found were from Russian Olive trees *Elaeagnus angustifolia* and weighed 9 6 8 3% of collected material Russian Olive trees originated from Europe and Asia but have been found in North America prior to 1900 Borell 1976 At one point the Russian Olive tree was being planted for land management purposes to help in soil conservation improvement of habitat windbreaks and also it was planted in residential areas Borrel 1951 Knopf and Olson 1984 Russian Olives are found in large numbers in Albuquerque as well as in the Rio Grande Valley area The fruit grows in the early fall and stays on the tree through the winter Thus the berries are available to wildlife when other food is in short supply in the winter months Borrell 1951 Although Russian olive may provide a plentiful source of edible fruits it has been found that bird species richness is higher in riparian areas dominated by native vegetation and not the exotic Russian olive Knopf and Olson 1984 Despite this fact Borrel 1951 author of Russian Olive as a Wildlife Food observed Mountain Bluebirds feeding on Russian olive trees Also Russian olive was used by over one third of the bird species in the Gila Valley area of New Mexico as a nesting site perhaps due to increased protection as a nesting site due to spines and a thicket forming growth pattern Stoleson and Finch 2001 However despite these possible benefits it has been estimated that 31% of native bird species that depend on native trees for nesting and insects would be harmed by colonization by Russian olive Shafroth et al 1995 An increase fruits available for passerines in the winter in New Mexico may allow for resident populations to remain if temperatures in the Southwest increase in the future
