The Geological Sciences In The Antebellum South:

Geological Sciences in the Antebellum South James X. Corgan, 2014-06-15 Nine essays that provide detailed information about the early geological exploration of the southeastern United States Originally presented under the aegis of the Geological Society of America these essays cover observations and studies made between 1796 and the 1850s Each essay includes fascinating biographic sketches of the author a bibliography and an index **The Geological Sciences in the**

Antebellum South James X. Corgan, 1982-01-01 *Science and Medicine in the Old South* Ronald Numbers, Todd L. Savitt, 1999-03-01 With a few notable exceptions historians have tended to ignore the role that science and medicine played in the antebellum South The fourteen essays in *Science and Medicine in the Old South* help to redress that neglect by considering scientific and medical developments in the early nineteenth century South and by showing the ways in which the South's scientific and medical activities differed from those of other regions The book is divided into two sections The essays in the first section examine the broad background of science in the South between 1830 and 1860 the second section addresses medicine specifically The essays frequently counterpoint each other In the first section Ronald Numbers and Janet Numbers argue that the South's failure to keep pace with the North in scientific areas resulted from demographic factors William Scarborough asserts that slavery produced a social structure that encouraged agricultural and political careers rather than scientific and industrial ones Charles Dew offers a strong indictment of slavery suggesting that the conservative influence of the institution severely discouraged the adoption of modern technologies Other essays examine institutions of higher learning in the South southern scientific societies and the relationship between science and theology The section on medicine in the Old South also examines the ways in which the medical needs and practices of the Old South were both similar to and distinct from those of other regions K David Patterson argues that slavery in effect imported African diseases into the Southeast and created a modified West African disease environment James H Cassedy points out that land management policies determined by slavery land clearing soil exhaustion also helped create a distinctive disease environment Other contributors discuss southern public health problems domestic medicine slave folk beliefs and the special medical needs of blacks *Science and Medicine in the Old South* is a long overdue examination of these segments of the southern cultural milieu These essays will do much to clarify misconceptions about the time and the region moreover they suggest directions for future research *Frontiers of Science* Cameron B. Strang, 2018-06-13 Cameron Strang takes American scientific thought and discoveries away from the learned societies museums and teaching halls of the Northeast and puts the production of knowledge about the natural world in the context of competing empires and an expanding republic in the Gulf South People often dismissed by starchy northeasterners as nonintellectuals Indian sages African slaves Spanish officials Irishmen on the make clearers of land and drivers of men were also scientific observers gatherers organizers and reporters Skulls and stems birds and bugs rocks and maps tall tales and fertile hypotheses came from them

They collected described and sent the objects that scientists gazed on and interpreted in polite Philadelphia They made knowledge Frontiers of Science offers a new framework for approaching American intellectual history one that transcends political and cultural boundaries and reveals persistence across the colonial and national eras The pursuit of knowledge in the United States did not cohere around democratic politics or the influence of liberty It was as in other empires divided by multiple loyalties and identities organized through contested hierarchies of ethnicity and place and reliant on violence By discovering the lost intellectual history of one region Strang shows us how to recover a continent for science An Abolitionist in the Appalachian South Ezekiel Birdseye, Durwood Dunn, 1997 This volume a collection of letters written by an abolitionist businessman who lived in East Tennessee prior to the Civil War provides one of the clearest firsthand views yet published of a region whose political social and economic distinctions have intrigued historians for more than a century Between 1841 and 1846 Birdseye expressed his views and observations in letters to Gerrit Smith a prominent New York reformer who arranged to have many of them published in antislavery newspapers such as the Emancipator and Friend of Man Those letters reproduced in this book drew on Birdseye s extensive conversations with slaveholders nonslaveholders and the slaves themselves He found that East Tennesseans on the whole were antislavery in sentiment susceptible to rational abolitionist appeal and generally far more lenient toward individual slaves than were other southerners Opposed to slavery on economic as well as moral grounds Birdseye sought to establish a free labor colony in East Tennessee in the early 1840s and actively supported the region s abortive effort in 1842 to separate itself from the rest of the state book jacket **The Bloomsbury Encyclopedia of the American Enlightenment** Mark G. Spencer, 2015-01-01 The first reference work on one of the key subjects in American history filling an important gap in the literature with over 500 original essays Notes from the Ground Benjamin R. Cohen, 2009-10-20 This text examines the cultural conditions that brought agriculture and science together in 19th century America Integrating the history of science environmental history and science studies this text shows how and why agrarian Americans accepted resisted and shaped scientific ways of knowing the land **Mountains on the Market** Randal L. Hall, 2012-07-20 Manufacturing in the Northeast and the Midwest pushed the United States to the forefront of industrialized nations during the early nineteenth century the South however lacked the large cities and broad consumer demand that catalyzed changes in other parts of the country Nonetheless in contrast to older stereotypes southerners did not shun industrial development when profits were possible Even in the Appalachian South where the rugged terrain presented particular challenges southern entrepreneurs formed companies as early as 1760 to take advantage of the region s natural resources In Mountains on the Market Industry the Environment and the South Randal L Hall charts the economic progress of the New River Valley in the Blue Ridge Mountains of southwestern Virginia which became home to a

wide variety of industries By the start of the Civil War railroads had made their way into the area and the mining and processing of lead copper and iron had long been underway Covering 250 years of industrialization environmental exploitation and the effects of globalization Mountains on the Market situates the New River Valley squarely in the mainstream of American capitalism **A Traitor and a Scoundrel** Michael Thomas Smith,2003 In 1856 Benjamin Hedrick broke with his white North Carolinian peers by taking an antislavery position on the question of the incorporation of the territories This biography tells the story of how developed that position the loss of his position as a professor of chemistry and his subsequent exile
