Skin Bioengineering Techniques And Applications In Dermatology And Cosmetology:

Skin Bioengineering P. Elsner, A. O. Barel, E. Berardesca, B. Gabard, J. Serup, P. Itin, G. B. E. Jemec, 1998-07 Non invasive bioengineering techniques have become indispensable tools both in the development of drugs and cosmetics and in clinical dermatology. These techniques enable researchers to study the structure and function of human skin objectively and quantitatively. Recent technological developments have brought new techniques into the laboratory and the hospital among them magnetic resonance imaging, optical coherence tomography and microdialysis. This book describes these state of the art developments, details the application of skin bioengineering techniques for clinical purposes, shows their use in the testing of pharmaceuticals and cosmetics and provides an overview of the design and legal aspects of skin bioengineering testing. It will be essential reading for dermatologists, cosmetologists, pharmacologists and toxicologists. **Handbook of Cosmetic**

Science and Technology André O. Barel, Howard I. Maibach, 2001-07-13 This state of the art reference provides comprehensive multidisciplinary coverage of the most recent information on cosmetic ingredients, finished products, target organs, delivery systems and current technology in safety, toxicology and dermatological testing. Principles and Practice of Skin Toxicology Robert Chilcott, Shirley Price, 2008-07-31 Written by authorities in the field, this book provides a bottom up approach to studying skin toxicology. *Principles and Practice of Skin Toxicology* clearly outlines basic concepts, cites historical and modern references and contains a dictionary for easy reference. The inclusion of global legislation and regulatory aspects on the topic makes this a comprehensive review for every practitioner, clinical researcher in industry and academia and MSc and PhD student of toxicology. Different sections cover skin structure and function, principles and measurement of skin absorption, clinical aspects of dermal toxicity and in vitro alternatives. A section on regulatory and legislative aspects includes case studies from the UK that fulfill European Union and US FDA requirements. A glossary provides definitions of technical terms and the chapters contain an introduction, learning boxes and summary.

section for ease of use Includes a chapter on drug delivery through the skin Addresses risk assessment a key area for the interpretation of skin absorption data that is rarely covered *Measuring the Skin* Pierre G. Agache, Pierre Agache, Philippe Humbert, 2004-07-15 *Measuring the Skin* presents all techniques devoted to non invasive normal or diseased skin measurement As opposed other books this text embraces old and new validated techniques for all skin suborgans and functions The book is ideal as a small encyclopedia since it provides the answer to any question concerning skin measurement Each technique is discussed to help select the most appropriate one for each special case Another novel feature is that the book bases the skin investigation on the physiology and anatomy Each chapter is preceded by a compendium of current knowledge on the structure or function dealt with The book may also be used as a research tool It contains a novel and presently unique list of more than 400 physical and biological skin constants which are all referenced

Cosmetics P. Elsner, Hans F. Merk, Howard I. Maibach, 2012-12-06 th Together with the 6 Amendment Council Directive 93/35 EEC to the Cosmetic Directive 76/768 EEC it was the first time that according to Article 7b special claims of efficacy could be legally attributed to cosmetic products but under the obligation to make evidence of the claimed effects also an entirely new controller was introduced the independent safety assessor This indeed means not only progress in reliable and honest marketing arguments but above all transparency as to the respective proof and thus protection of consumer's health Such claims demand high standards in scientifically based methodology and their results in order to prove such demands evidently There are also within the 6 Amendment to the Cosmetic Directive in Article 4a strict restrictions as to the further use of conventional animal testing for cosmetic products and their ingredients and especially for finished products Without doubt there is a competition between the necessity and expectations on consumer health on the one hand and the requirements of acknowledged protection of animals as done in Council Directive 86/609 EEC on the other But at least based on the present state of knowledge tests in human beings cannot replace animal testing in all instances Not only ethical reasons alone prohibit or impede testing in humans but also very often the lack of knowledge on functional and or biological processes underlying observed effects with the consequence that suitable experimental methodologies are missing
