The Moons Of Our Solar System:

Moons of the Solar System James A. Hall III, 2015-09-19 This book captures the complex world of planetary moons which are more diverse than Earth's sole satellite might lead you to believe. New missions continue to find more of these planetary satellites making an up to date guide more necessary than ever. Why do Mercury and Venus have no moons at all? Earth's Moon of course is covered in the book with highly detailed maps. Then we move outward to the moons of Mars then on to many of the more notable asteroid moons and finally to a list of less notable ones. All the major moons of the gas giant planets are covered in great detail while the lesser known satellites of these worlds are also touched on. Readers will learn of the remarkable trans-Neptunian Objects: Pluto, Eris, Sedna, Quaoar including many of those that have been given scant attention in the literature. More than just objects to read about, the planets' satellites provide us with important information about the history of the solar system. Projects to help us learn more about the moons are included throughout the book. Most amateur astronomers can name some of the more prominent moons in the solar system but few are intimately familiar with the full variety that exists in our backyard. 146 and counting. As our understanding of the many bodies in our solar system broadens, this is an invaluable tour of our expanding knowledge of the moons both near and far. *Moons of the Solar System, Revised Second Edition* Thomas Wm. Hamilton, 2019 Retired astronomer Thomas Wm. Hamilton has written six books on astronomy. But science always changes. His most recent book *Moons of the Solar System* has just been revised to incorporate the newest research and information on these amazing bodies in the sky. The new title is *Moons of the Solar System Revised Second Edition Incorporating the Latest Discoveries in Our Solar System as well as Suspected Exomoons*. Having once worked on the Apollo Project, the author has long been fascinated in studying moons. From Galileo's discoveries in 1610 to the latest returns from the Cassini spacecraft in orbit around Saturn, four centuries of discoveries in the solar system are summarized complete with the names of those responsible for finding them. The 185 known moons of the planets and dwarf planets in the solar system are described in great detail from how they were discovered and by whom to information about their sizes and orbits. The strange and exotic origins of the moons' names make for astonishing stories. *Moons of the Solar System* also includes the possible dangers faced by human travel in space. **The Moons of Our Solar System** David C. Knight, 1980 Discusses the possible origins, composition, and characteristics of the natural satellites in the solar system. Incorporates data from the Voyager and Pioneer flights. [Our Solar System](#) , [Moons of Our Solar System](#) Kerri O'Donnell, 2009-01-01 Although Earth has only one moon, other planets in our solar system have more. Readers learn about the fascinating features of these other moons. [Our Solar System! A Stellar Neighborhood](#) Stacy McAnulty, 2025-09-02 From writer Stacy McAnulty and illustrator Stevie Lewis, *Our Solar System* is a light-hearted nonfiction picture book about the members of our solar system from the eyes of Comet who's been traveling through the Solar System for eons. Yee haw! Strap in for one wild ride through our very own Solar System guided by space travelin' buckaroo Comet.

himself while you travel around meeting one impressive star 8 unique planets a handful of dwarf planets and a bonanza of moons asteroids and comets With characteristic humor and charm Stacy McAnulty channels the voice of Comet in this next celestial autobiography in the Our Universe series Rich with kid friendly facts and beautifully brought to life by Stevie Lewis this is an equally charming and irresistible companion to the other books in this series like Earth My First 4 54 Billion Years and Sun One in a Billion
