Global Environmental Economy Under the Conditions of Climate Change and the Perspectives of Sustainable Development Elena G. Popkova, Bruno S. Sergi, 2023-01-31

This book presents a systemic view of the global environmental economy under the conditions of climate change from the positions of Sustainable Development Goals. The purpose of the book is to study the current problems of the global environmental economy under the conditions of climate change and to determine the prospects of its sustainable development systemic support for the SDGs. This goal predetermines the logic and structure of the book which is comprised of five parts. Part I presents the authors' novel view of the global environmental economy under the conditions of climate change from the positions of the SDGs. It reflects the contradiction and describes the path of preserving economic growth during the implementation of SDG 13. The COVID 19 pandemic and economic crisis are considered as the result of the reduction of biodiversity under the conditions of climate change from the positions of SDG 3. Responsible innovations, eco-friendly products and green trade are presented as trends of the environmental economy under the conditions of climate change to support SDG 12. Green jobs are analyzed in the environmental economy under the conditions of climate change during the implementation of SDG 8. The significance of social inclusivity and reduction of the inequality of the environmental economy under the conditions of climate change to support SDG 10 is noted. Part II elaborates on the sectoral specifics of the influence of climate change on the environmental economy: energetics, finance, industry, state management and agriculture. Part III presents and discusses the international experience of development of the environmental economy under the conditions of climate change given the specifics of developed and developing countries and based on the case experience of Central Asia, the EAEU and Russia. In Part IV, technological transition. Fourth Industrial Revolution is offered as a perspective response of the global economic policy to climate change. Scenarios of the fight against climate change in the Decade of Action depending on the scale of the technological transition are described: digital economy vs Industry 4.0 and Society 5.0. The perspectives of the technological transition at the level of companies, creation of cyber-physical systems of Industry 4.0, green digital innovations and smart ESG finance and regions, smart region as a socio-economic environment with large adaptability to climate change are described.

The Global Environment and World

Politics Elizabeth R. DeSombre, 2007-06-01. Environmental issues are increasingly important factors in world politics. Just think of the intense speculation over the climate change discussions at the forthcoming G8 summit. The study of global environmental politics draws on a variety of academic traditions. It uses international relations theory to look at the concerns and actions of states but has also had to find a variety of new concepts and perspectives in order to explain issues unique to the study of the environment. Here DeSombre examines four important aspects of the field: international environmental cooperation, the relationship between the environment and security, the issues of science uncertainty and risk, and the role of non-state actors. In the second half of the book, she examines these issues through the use of case studies on specific problems facing the global environment, including global change, the politics of whaling, the protection of Amazonian

biodiversity and acid rain in Europe and North America *The Business of Global Environmental Governance* David L. Levy, Peter John Newell, 2005 Theoretical and empirical accounts of the role of business in shaping international environmental policies A Global Environmental Right Stephen Turner, 2013-09-11 The development of an international substantive environmental right on a global level has long been a contested issue To a limited extent environmental rights have developed in a fragmented way through different legal regimes This book examines the potential for the development of a global environmental right that would create legal duties for all types of decision makers and provide the bedrock for a new system of international environmental governance Taking a problem solving approach the book seeks to demonstrate how straightforward and logical changes to the existing global legal architecture would address some of the fundamental root causes of environmental degradation It puts forward a draft global environmental right that would integrate duties for both state and non state actors within reformed systems of environmental governance and a rational framework for business and industry to adhere to in order that those systems could be made operational It also examines the failures of the existing international climate change regime and explains how the draft global environmental right could remedy existing deficits This innovative and interdisciplinary book will be of great interest to policy makers students and researchers in international environmental law climate change environmental politics and global environmental governance as well as those studying the WTO international trade law human rights law constitutional law and corporate law Global Environment Current St. Sunit Gupta, 2000 **A Companion to Global Environmental History** J. Reframing Climate Change Shannon O'Lear,Simon Dalby,2015-07-24 Change the system not the climate is a common slogan of climate change activists Yet when this idea comes into the academic and policy realm it is easy to see how climate change discourse frequently asks the wrong questions Reframing Climate Change encourages social scientists policy makers and graduate students to critically consider how climate change is framed in scientific social and political spheres It proposes ecological geopolitics as

a framework for understanding the extent to which climate change is a meaningful analytical focus as well as the ways in which it can be detrimental detracting attention from more productive lines of thought research and action The volume draws from multiple perspectives and disciplines to cover a broad scope of climate change Chapter topics range from climate science and security to climate justice and literacy Although these familiar concepts are widely used by scholars and policy makers they are discussed here as frequently problematic when used as lenses through which to study climate change Beyond merely reviewing current trends within these different approaches to climate change the collection offers a thoughtful assessment of these approaches with an eye towards an overarching reconsideration of the current understanding of our relationship to climate change Reframing Climate Change is an essential resource for students policy makers and anyone interested in understanding more about this important topic Who decides what the priorities are Who benefits from these priorities and what kinds of systems or actions are justified or hindered The key contribution of the book is the outlining of ecological geopolitics as a different way of understanding human environment relationships including and beyond climate change issues
