Site-Selective Neurotoxicity David S Lester, William Slikker Jr, Philip Lazarovici, 2002-02-07 This unique volume provides interdisciplinary coverage of the mechanistic perspective of neurotoxicity that focuses on the site of action of known neurotoxins It provides the reader with an insight into the common characteristics of neurotoxin action on the nervous system and examines sites of action at three levels of complexity molecular cellular and organismal *Pore-forming Peptides and Protein Toxins* Gianfranco Menestrina, M. Dalla Sera, 2003-01-30 Pore forming proteins and peptides play a central role in bacterial pathogenesis the immune response venomous attack and innate immunity *Pore forming Peptides and Protein Toxins* describes how natural and synthetic peptides and toxins form pores and ionic channels that cause cell membrane collapse and cell death Written by researchers from around the world it discusses such topics as the channel forming properties of *Helicobacter pylori* and the role of amyloid peptide channels in the development of amyloid diseases This text provides a multidisciplinary approach to understanding the basic principles and cellular mechanisms of the actions of toxins and their potential use as research tools *Acute Exposure Guideline Levels for Selected Airborne Chemicals* National Research Council, Division on Engineering and Physical Sciences, Board on Environmental Studies and Toxicology, Committee on Toxicology, Subcommittee on Acute Exposure Guideline Levels, 2003-06-15 This report reviews documents on acute exposure guideline levels AEGLs for nerve agents GA tabun GB sarin GD soman GD and VX sulfur mustard diborane and methyl isocyanate The documents were developed by the National Advisory Committee on Acute Exposure Guideline Levels for Hazardous Chemicals NAC The subcommittee concludes that the AEGLs developed in those documents are scientifically valid conclusions based on data reviewed by NAC and are consistent with the NRC reports on developing acute exposure guideline levels The Handbook of Biomarkers Kewal K. Jain, 2010-02-06 Of the thousands of biomarkers that are currently being discovered relatively few are being validated for further applications and the potential of a biomarker can be quite difficult to evaluate To aid in this imperative research Dr Kewal K Jain s *Handbook of Biomarkers* thoroughly describes many different types of biomarkers and their discovery using various omics technologies such as proteomics and metabolomics along with the background information needed for the evaluation of biomarkers as well as the essential procedures for their validation and use in clinical trials With biomarkers described first according to technologies and then according to various diseases this detailed book features the key correlations between diseases and classifications of biomarkers which provides the reader with a guide to sort out current and future biomarkers Comprehensive and cutting edge *The Handbook of Biomarkers* serves as a vital guide to furthering our understanding of biomarkers which by facilitating the combination of therapeutics with diagnostics promise to play an important role in the development of personalized medicine one of the most important emerging trends in healthcare today *Chimeric Toxins* Haya Lorberboum-Galski, Philip Lazarovici, 2002-05-30 Bacteria and plants produce powerful toxins that can cause a variety of diseases some of which are lethal for many animal species The

mechanisms of action are common to many of these toxins and represent general pathways for the interaction of a number of biomolecules with target cells such as binding to specific surface receptors internalizati

Neurotoxicology G. Jean Harry,Hugh A. Tilson,2016-04-19 This new edition presents an integrated approach to neurotoxicology the study of organisms responses to changes in their environment and how interruption of the flow of information by chemical exposure causes a wide range of effects from learning deficits sensory disturbances in the extremities and muscle weakness to seizures and signs simila

Handbook of Neurotoxicology Edward J. Massaro,2002-03-20 Neurotoxicology is a broad and burgeoning field of research Its growth in recent years can be related in part to increased interest in and concern with the fact that a growing number of anthropogenic

agents with neurotoxic potential including pesticides lead mercury and the polytypic byproducts of combustion and industrial production continue to be spewed into and accumulate in the environment In addition there is great interest in natural products including toxins as sources of therapeutic agents Indeed it is well known that many natural toxins of broadly differing structure produced or accumulated for predatory or defensive purposes and toxic agents accumulated incidentally by numerous species function to perturb nervous tissue Components of some of these toxins have been shown to be useful therapeutic agents and or research reagents Unfortunately some neurotoxicants of anthropogenic origin unfortunately the environmental accumulation of especially pesticides and metals has resulted in incidents of human poisoning some of epidemic proportion and high levels of morbidity and mortality Furthermore an increasing incidence of neurobehavioral disorders some with baffling symptoms is confronting clinicians It is not clear whether this is merely the result of increased vigilance and or improved diagnostics or a consequence of improved health care In any case the role of exposure to environmental and occupational neurotoxicants in the etiology of these phenomena as well as neurodegenerative diseases is coming under increasing scrutiny and investigation
