Race in the Making Lawrence A. Hirschfeld, 1996 *Race in the Making* provides a new understanding of how people conceptualize social categories and shows why this knowledge is so readily recruited to create and maintain systems of unequal power Hirschfeld argues that knowledge of race is not derived from observations of physical difference nor does it develop in the same way as knowledge of other social categories Instead his central claim is that racial thinking is the product of a special purpose cognitive competence for understanding and representing human kinds The book also challenges the conventional wisdom that race is purely a social construction by demonstrating that a common set of abstract principles underlies all systems of racial thinking whatever other historical and cultural specificities may be associated with them Starting from the commonplace observation that race is a category of both power and the mind

Race in the Making directly tackles this issue Through a sustained exploration of continuity and change in the child's notion of race and across historical variations in the race concept Hirschfeld shows that a singular commonsense theory about human kinds constrains the way racial thinking changes whether in historical time or during childhood After surveying the literature on the development of a cultural psychology of race Hirschfeld presents original studies that examine children's and occasionally adults' representations of race He sketches how a jointly cultural and psychological approach to race might proceed showing how this approach yields new insights into the emergence and elaboration of racial thinking

Language Creation and Language Change Michel DeGraff, 1999 Research on creolization language change and language acquisition has been converging toward a triangulation of the constraints along which grammatical systems develop within individual speakers and viewed externally across generations of speakers The originality of this volume is in its comparison of various sorts of language development from a number of linguistic theoretic and empirical perspectives using data from both speech and gestural modalities and from a diversity of acquisition environments In turn this comparison yields fresh insights on the mental bases of language creation The book is organized into five parts creolization and acquisition acquisition under exceptional circumstances language processing and syntactic change parameter setting in acquisition and through creolization and language change and a concluding part integrating the contributors' observations and proposals into a series of commentaries on the state of the art in our understanding of language development its role in creolization and diachrony and implications for linguistic theory Contributors Dany Adone Derek Bickerton Adrienne Bruyn Marie Coppola Michel DeGraff Viviane D. Learnability and Cognition, new edition Steven Pinker, 2013-05-24 A classic book about language acquisition and conceptual structure with a new preface by the author The Secret Life of Verbs Before Steven Pinker wrote bestsellers on language and human nature he wrote several technical monographs on language acquisition that have become classics in cognitive science Learnability and Cognition first published in 1989 brought together two big topics how do children learn their mother tongue and how does the mind represent basic categories of meaning such as space time causality agency and goals The stage for this synthesis was set by the fact that when children learn a language they come to make surprisingly subtle distinctions pour water into the glass and fill the glass with water sound natural but pour the glass with water and fill water into the glass sound odd How can this happen given that children are not reliably corrected for uttering odd sentences and they don't just parrot back the correct ones they hear from their parents Pinker resolves this paradox with a theory of how children acquire the meaning and uses of verbs and explores that theory's implications for language thought and the relationship between them As Pinker writes in a new preface The Secret Life of Verbs the phenomena and ideas he explored in this book inspired his 2007 bestseller The Stuff of Thought Language as a Window into Human Nature These technical

discussions he notes provide insight not just into language acquisition but into literary metaphor scientific understanding political discourse and even the conceptions of sexuality that go into obscenity *Systems that Learn* Sanjay Jain,1999 This introduction to the concepts and techniques of formal learning theory is based on a number theoretical approach to learning and uses the tools of recursive function theory to understand how learners come to an accurate view of reality **Words, Thoughts, and Theories** Alison Gopnik,Andrew N. Meltzoff,1998-09-01 Words Thoughts and Theories articulates and defends the theory theory of cognitive and semantic development the idea that infants and young children like scientists learn about the world by forming and revising theories a view of the origins of knowledge and meaning that has broad implications for cognitive science Gopnik and Meltzoff interweave philosophical arguments and empirical data from their own and other s research Both the philosophy and the psychology the arguments and the data address the same fundamental epistemological question How do we come to understand the world around us Recently the theory theory has led to much interesting research However this is the first book to look at the theory in extensive detail and to systematically contrast it with other theories It is also the first to apply the theory to infancy and early childhood to use the theory to provide a framework for understanding semantic development and to demonstrate that language acquisition influences theory change in children The authors show that children just beginning to talk are engaged in profound restructurings of several domains of knowledge These restructurings are similar to theory changes in science and they influence children s early semantic development since children s cognitive concerns shape and motivate their use of very early words But in addition children pay attention to the language they hear around them and this too reshapes their cognition and causes them to reorganize their theories The Algebraic Mind Gary F. Marcus,2019-01-01 In The Algebraic Mind Gary Marcus attempts to integrate two theories about how the mind works one that says that the mind is a computer like manipulator of symbols and another that says that the mind is a large network of neurons working together in parallel Resisting the conventional wisdom that says that if the mind is a large neural network it cannot simultaneously be a manipulator of symbols Marcus outlines a variety of ways in which neural systems could be organized so as to manipulate symbols and he shows why such systems are more likely to provide an adequate substrate for language and cognition than neural systems that are inconsistent with the manipulation of symbols Concluding with a discussion of how a neurally realized system of symbol manipulation could have evolved and how such a system could unfold developmentally within the womb Marcus helps to set the future agenda of cognitive neuroscience
