Terranova, 2014-01-15 In the twenty first century we are continually confronted with the existential side of technology the relationships between identity and the mechanizations that have become extensions of the self Focusing on one of humanity s most ubiquitous machines Automotive Prosthetic Technological Mediation and the Car in Conceptual Art

combines critical theory and new media theory to form the first philosophical analysis of the car within works of conceptual art. These works are broadly defined to encompass a wide range of creative expressions particularly in car based conceptual art by both older established artists and younger emerging artists including Ed Ruscha, Martha Rosler, Richard Prince, Sylvie Fleury, Yael Bartana, Jeremy Deller, and Jonathan Schipper. At its core, the book offers an alternative formation of conceptual art understood according to technology, the body moving through space, and what art historian, curator, and artist Jack Burnham calls relations. This thought provoking study illuminates the ways in which the automobile becomes a naturalized extension of the human body, incarnating new forms of car art and spurring a technological reframing of conceptual art. Steeped in a sophisticated take on the image and semiotics of the car, the chapters probe the politics of materialism as well as high low debates about taste, culture, and art. The result is a highly innovative approach to contemporary intersections of art and technology.

Design Education Robin Vande Zande, 2016-12-07. *Design Education: Creating Thinkers to Improve the World* is a curricular resource that offers theoretical concepts and practical advice for teaching lessons in design to PreK-12 grade students. The book is for art educators at the preK-12 level in schools, museums, and enrichment programs, and university professors in teacher preparation programs. Design education is about problem solving, learning through objects of our daily lives, and the role design plays in social responsibility and the creative economy. Designers utilize research methods, technology, sketching, and the construction of prototypes. The basis of these techniques, systems, and tools may be taught to PreK-12 students. Students need lifelong skills that build their creativity and problem solving capabilities to better understand the world and themselves and use visual communication to advance their abilities to express ideas. Design is a study about life and can touch on all school subjects, making it a valuable interdisciplinary study. Students are able to directly apply thinking strategies and learning about facts, figures, and concepts at the same time they are crafting meaningful ideas about the importance, influence, and social implications of everyday items and the potential to improve the world.
