

The book cover features a dramatic landscape photograph. In the foreground, two large palm trees are silhouetted against a bright, orange-hued sky. The sun is a glowing orb in the center of the sky, partially obscured by clouds. In the background, a line of trees is visible, and at the bottom of the image, a bright orange fire or smoke line stretches across the horizon. The overall color palette is dominated by warm tones of orange, yellow, and brown.

Natural Forest Management in the American Tropics Francis E. Putz, 1991

Hunting for Sustainability in Tropical Forests John Robinson, Elizabeth L. Bennett, 2000-02-08 Throughout the world people are concerned about the demise of tropical forests and their wildlife Hunting by forest dwelling people has a dramatic effect on wildlife in many tropical forests frequently driving species to local extinction with devastating implications for other species and the health of the forests themselves But wildlife is an important source of protein and cash for rural peoples Can hunting be managed to conserve biological communities while meeting human needs Are hunting rates as practiced by tropical forest peoples sustainable If not what are the biological social and cultural implications of this failure Answering these questions is ever more important as national and international agencies seek to integrate the development of local peoples with the conservation of tropical forest systems and species This book presents a wide array of studies that examine the sustainability of hunting as practiced by rural peoples Comprising work by both biological and social scientists *Hunting for Sustainability in Tropical Forests* provides a balanced viewpoint on the ecological and human aspects of this hunting The first section examines the effects of hunting on wildlife in tropical forests throughout the world The next section looks at the importance of hunting to local communities The third section looks at institutional challenges of resource management while the fourth draws on economic perspectives to understand both hunting and sustainability A final section provides synthesis and summary of the factors that influence sustainability and the implications for management Drawing on examples from Ecuador to Congo Zaire to Sulawesi *Hunting for Sustainability in Tropical Forests* will be a valuable resource to policymakers conservation organizations and students and scholars of biology ecology and anthropology

Amazonian Geographies Jacqueline Vadjunec, Marianne Schmink, 2014-07-16

Amazonia exists in our imagination as well as on the ground It is a mysterious and powerful construct in our psyches yet shares multiple trans national borders and diverse ecological and cultural landscapes It is often presented as a seemingly homogeneous place a lush tropical jungle teeming with exotic wildlife and plant diversity as well as the various indigenous populations that inhabit the region Yet since Conquest Amazonia has been linked to the global market and after a long and

varied history of colonization and development projects Amazonia is peopled by many distinct cultural groups who remain largely invisible to the outside world despite their increasing integration into global markets and global politics Millions of rubber tappers neo native groups peasants river dwellers and urban residents continue to shape and re shape the cultural landscape as they adapt their livelihood practices and political strategies in response to changing markets and shifting linkages with political and economic actors at local regional national and international levels This book explores the diversity of changing identities and cultural landscapes emerging in different corners of this rapidly changing region This book was published as a special issue of the Journal of Cultural Geography

Incomes from the Forest Eva Wollenberg, Andrew Ingles, 1998-01-01 Documentation and comparison methods to assess options for forest based livelihoods and their outcomes The contributions are based on the premise that livelihood and conservation goals can be best achieved by improving information flow about changes in the environment and the impacts of forest use The authors report on the strengths and weaknesses of methods that have been tried in the field

Biodiversity and Ecosystem Processes in Tropical Forests Gordon H. Orians, Rodolfo Dirzo, J. Hall Cushman, 2012-12-06 Although biologists have directed much attention to estimating the extent and causes of species losses the consequences for ecosystem functioning have been little studied This book examines the impact of biodiversity on ecosystem processes in tropical forests one of the most species rich and at the same time most endangered ecosystems on earth It covers the relationships between biodiversity and primary production secondary production biogeochemical cycles soil processes plant life forms responses to disturbance and resistance to invasion The analyses focus on the key ecological interfaces where the loss of keystone species is most likely to influence the rate and stability of ecosystem processes

Getting Biodiversity Projects to Work Thomas O. McShane, Michael P. Wells, 2004-07-28 This book explores both the theoretical and practical underpinnings of integrated conservation and development It synthesizes existing experience to better inform conservationists and decision makers of the role ICDPs play in conservation and management and analyzes their successes and shortcomings

The Cutting Edge Robert A. Fimbel, Alejandro Grajal, John Robinson, 2001-12-19 Recent decades have seen unprecedented growth in the scale and intensity of industrial forestry Directly and indirectly it has degraded the wildlife and ecological integrity of these tropical forests prompting a need to evaluate the impact of current forest management practices and reconsider how best to preserve the integrity of the biosphere Synthesizing the body of knowledge of leading scientists and professionals in tropical forest ecology and management this book s thirty chapters examine in detail the interplay between timber harvesting and wildlife from hunted and protected habitats to invertebrates and large mammal species Collectively the contributors suggest that better management is pivotal to the maintenance of the tropics valuable biodiversity arguing that we must realize that tropical forests harbor the majority perhaps 70 to 80 percent of the world s animal species Further they suggest modifications to existing practices that can ensure a better future for our valuable resources

Biodiversity David L.

Hawksworth, Royal Society (Great Britain), 1995-11-30 Leading experts on the field of biodiversity examine examples from a wide range of organism groups Their approaches include the latest molecular and phylogenetic techniques through to the selection of indicator data and aspects of sampling This paperback edition has been published for students on biodiversity related courses

The Maya Forest Garden Anabel Ford, Ronald Nigh, 2016-07-01 The conventional wisdom says that the devolution of Classic Maya civilization occurred because its population grew too large and dense to be supported by primitive neotropical farming methods resulting in debilitating famines and internecine struggles Using research on contemporary Maya farming techniques and important new archaeological research Ford and Nigh refute this Malthusian explanation of events in ancient Central America and posit a radical alternative theory The authors show that ancient Maya farmers developed ingenious sustainable woodland techniques to cultivate numerous food plants including the staple maize examine both contemporary tropical farming techniques and the archaeological record particularly regarding climate to reach their conclusions make the argument that these ancient techniques still in use today can support significant populations over long periods of time

GIS Methodologies for Developing Conservation Strategies Basil G. Savitsky, Thomas E. Lacher, Jr., 1998-04-28 Tropical habitats may contain more than a third of the world's plant and animal species Costa Rica alone is home to one of the highest levels of biodiversity per unit area in the world and stands at center stage in worldwide conservation efforts Within such regions the use of state of the art digital mapping technologies sophisticated techniques that are relatively inexpensive and accessible represents the future of conservation planning and policy These methods which employ satellites to obtain visual data on landscapes allow environmental scientists to monitor encroachment on indigenous territories trace park boundaries through unmarked wilderness and identify wildlife habitats in regions where humans have limited access Focusing on the rich biodiversity of Costa Rica the contributors demonstrate the use of geographic information systems GIS to enhance conservation efforts They give an overview of the spatial nature of conservation and management and the current status of digital mapping in Costa Rica a review of the basic principles behind digital mapping technologies a series of case studies using these technologies at a variety of scales and for a range of conservation and management activities and the results of the Costa Rican gap analysis project GIS Methodologies for Developing Conservation Strategies provides powerful tools for those involved in decision making about the natural environment particularly in developing nations like Costa Rica where such technologies have not yet been widely adopted For specialists in such areas as geography conservation biology and wildlife and natural resource management the combination of conceptual background and case examples make the book a crucial addition to the literature

Conservation of Neotropical Forests Kent Hubbard Redford, Christine Padoch, 1992 Experts from both the natural and social sciences provide vital information for understanding the interactions of forest peoples and forest resources in the lowland tropics of Central and South America They investigate patterns of traditional resource use evaluate existing research and explore new directions for furthering the conservationist

agenda **Medicinal Resources of the Tropical Forest** Michael J. Balick, Elaine Elisabetsky, Sarah A. Laird, 1996 This book opens readers eyes to the enormous resources of the Earth s rain forests and the potential impact of their destruction in terms of human health An Environmental History of the World J. Donald Hughes, 2002-09-26 An Environmental History of the World is a concise history from Ancient to Modern times of the interaction between human societies and the other forms of life that inhabit our planet This original work follows a chronological path through the history of mankind in relationship to ecosystems around the world Each chapter concentrates on a general period in human history which has been characterised by large scale changes in the relationship of human societies to the biosphere and gives three case studies that illustrate the significant patterns occurring at that time Little environmental or historical knowledge is assumed from the reader in this introduction to environmental history Developing The Environment C J Barrow, 2014-09-19 This book presents a comprehensive overview of global environmental problems past present and future examining their roots and implications and suggesting where possible ways in which they might be mitigated or avoided by careful management *Tropical Deforestation* Leslie Elmer Sponsel, Thomas N. Headland, Robert Converse Bailey, 1996 The authors present fresh perspectives on the major global crisis of deforestation from a wide range of fields including biological ecology forest history conservation biology anthropology political economy and development economics **Land Tenure, Gender and Globalisation** Dzodzi Tsikata, Pamela Golah, 2010 Drawing from field research in Cameroon Ghana Vietnam and the Amazon forests of Brazil Bolivia and Peru this book explores the relationship between gender and land revealing the workings of global capital and of people s responses to it A central theme is the people s resistance to global forces frequently through an insistence on the uniqueness of their livelihoods For instance in the Amazon the focus is on the social movements that have emerged in the context of struggles over land rights concerning the extraction of Brazil nuts and babacu kernels in an increasingly globalised market In Vietnam the process of de collectivising rights to land is examined with a view to understand how gender and other social differences are reworked in a market economy The book addresses a gap in the literature on land tenure and gender in developing countries It raises new questions about the process of globalisation particularly about who the actors are local people the state NGOs multinational companies and the shifting relations amongst them The book also challenges the very concepts of gender land and globalization *The Equitable Forest* Carol J. Pierce Colfer, 2010-09-30 Research and policy toward sustainable forest management have often paid incomplete attention to the well being of local populations and their activities as forest managers Where there has been recognition of local communities the roles of marginalized groups and women are usually not well understood This is despite evidence that equity and social relationships including gender roles are important factors in the ways that communities manage forest resources overall and adapt to change Research and policy toward sustainable forest management have often paid incomplete attention to the well being of local populations and their activities as forest managers Where there has been recognition of local communities the
